QUESTION 1 OF 13 (SELECT TWO)

Chapter section: Concept 2, Models and thinking modes (three-level pattern, “start fast, escalate when hard”)

A zoo education officer uses Claude for two jobs on Monday morning. The first job is rewording 12 short sign captions for the reptile house, with no deadline. The second is checking a spreadsheet formula that totals school-group ticket revenue. These totals go into the board report on Friday, so the formula must be exactly right. She can use Claude’s fast everyday model (Sonnet), the thinking switch, or the heaviest model (Opus). **Which TWO choices match the task to the right level?**

A. Run the 12 captions on Opus, because visitors will read them.
B. Run the 12 captions on the fast everyday model.
C. Turn on thinking for the revenue formula check, because it must be correct.
D. Run the formula check on Sonnet with thinking off, to save usage.

Correct Answer: Option B and C

Explanation (Roman Urdu): B aur C sahi hain. Captions chhota, routine kaam hai aur deadline bhi nahi, is liye “start fast” ka rule lagta hai. Revenue formula board report mein jata hai aur “exactly right” chahiye, yani “code that has to be correct” wali category, is liye thinking mode (escalate when hard). A galat hai: chhote kaam par Opus lagana “model by habit” hai, jo slow aur mehnga hai. D galat hai: jahan sahi hona zaroori ho wahan sirf fast level par rehna “wrong level” wali ghalti hai.

Yaad rakhne wala rule: Chhota kaam = fast level, mushkil ya galti-mehnga kaam = thinking. Model kaam dekh kar chuno, aadat dekh kar nahi.

Roman Urdu word-by-word samajh

- reword = dobara alag alfaaz mein likhna
- captions = tasveer ya sign ke neeche chhoti likhai
- deadline = akhri waqt ya tareekh
- formula = spreadsheet mein hisaab karne ka tareeqa
- totals = kul jama
- board report = idare ke directors ko jane wali report
- exactly right = bilkul durust
- fast everyday model (Sonnet) = tez, roz ka model
- thinking switch = button jo Claude ko jawab se pehle sochne deta hai
- heaviest model (Opus) = sab se taqatwar, slow aur mehnga model
- match the task to the right level = kaam ko sahi darje se milana

Scenario ka matlab: Zoo ki officer ke paas do kaam hain. Pehla chhota hai (12 captions, koi jaldi nahi). Doosra bada hai (revenue formula, board report mein jayega, galti nahi chalegi). Sawal poochta hai: kaun se do choices kaam ko sahi level se jodte hain?

Exam trap: Do jaal hain. A kehta hai “zyada taqat = behtar” (hamesha bada model). D kehta hai “sasta = theek” (hamesha fast). Chapter kehta hai kaam dekho, aadat nahi.

Question pehchanne ke 3 role

- **Role 1 (type):** “Which TWO... match” ka matlab hai match-karo type, aur do sahi jore chahiye.
- **Role 2 (deciding detail):** “no deadline” aur “must be exactly right” level tay karte hain.
- **Role 3 (trap hatao):** Jo option sirf aadat se bada ya sasta chunta hai, usay hatao.

QUESTION 2 OF 13

Chapter section: Concept 3, Context you attach (stale chat signs and the state summary)

A carpentry estimator has kept one Claude chat open since 8 a.m. to build a bid for new library shelving at a school. Early on she set a rule: show all prices excluding tax. At 3 p.m. the prices appear with tax included, and a timber cost differs from the figure Claude gave her this morning. The bid is due at 5 p.m., and the drawings and price list are attached. **What is the most appropriate next step?**

A. Repeat the tax rule in this chat and keep working, checking each price by hand.
B. Switch this chat to the heaviest model, since it is clearly struggling.
C. Ask for a state summary of decisions, open items and rules, fix it, and paste it into a fresh chat with the files re-attached.
D. Close this chat and start a new one, retyping the rules from memory.

Correct Answer: Option C

Explanation (Roman Urdu): Ek rule bhool jana aur pehle wale figure se takra jana, dono “stale chat” ki nishaniyan hain. Chapter ka tareeqa hai: pehle state summary maango (faisle, baqi kaam, tamam rules), usay theek karo, phir naye chat mein files dobara attach kar ke paste karo. Is se 5 baje se pehle kaam bhi bachta hai. A galat hai: usi bhare hue chat mein dhakka lagate rehna, jab ke chapter kehta hai “do not keep pushing”. B galat hai: masla model ki taqat ka nahi, chat ke lamba hone ka hai. D galat hai: summary ke bagair yaad se rules likhne se faisle aur rules kho sakte hain.

Yaad rakhne wala rule: Chat purana ho jaye to dhakka nahi, state summary, phir fresh chat.

Roman Urdu word-by-word samajh

- estimator = qeemat ka andaza lagane wala
- bid = tender ya quote jo client ko bheja jata hai
- shelving = almariyan ya shelves
- excluding tax = tax ke bagair

- differs = alag hona
- attached = saath lagayi hui files
- state summary = ab tak ke faislon, baqi kaam aur rules ki chhoti summary
- fresh chat = bilkul naya chat
- re-attached = dobara attach karna
- struggling = mushkil mein hona

Scenario ka matlab: Subah se ek hi chat chal raha hai. Ab Claude apna hi rule bhool gaya (tax) aur pehle ke figure se ulta bol raha hai. Quote paanch baje tak jana hai.

Exam trap: A "thori si yaad dahani" jaisa halka fix lagta hai. B "bada model" wala aadat ka jaal hai. D "naya chat" sahi lagta hai, lekin bina summary ke adhura hai. Right-diagnosis wrong-fix aur half-right option se bacho.

Question pehchanne ke 3 role

- **Role 1 (type):** "most appropriate next step" ka matlab hai pehle diagnosis, phir sab se munasib kadam.
- **Role 2 (deciding detail):** "since 8 a.m." (lamba chat), "forgot rule" aur "contradicts figure" (stale signs), "files attached" (dobara attach karni hain).
- **Role 3 (trap hatao):** Jo option same chat mein rehta hai (A) ya model badalta hai (B) ya summary chhorta hai (D), usay hatao.

QUESTION 3 OF 13

Chapter section: "See it in two minutes" warning plus Concept 6 (canvas retired, replaced by writing blocks and code blocks)

An ice rink operations associate follows a tutorial that tells her to open "canvas" in ChatGPT and edit the weekly maintenance schedule in a panel beside the chat. She cannot find a canvas button. She asks ChatGPT where it is, and it answers confidently that canvas is in the plus menu, but she still cannot see it. The schedule is needed on Wednesday, and the tutorial is from last year. **What is the most appropriate next step?**

A. Ask ChatGPT the same question again on its strongest model, in case the first answer was careless.
B. Move the task to Claude, since only Claude can keep work apart from the chat.
C. Reinstall the app, since a missing button usually means a broken install.
D. Check OpenAI's current help page: canvas was retired and replaced by inline writing blocks.

Correct Answer: Option D

Explanation (Roman Urdu): Chapter kehta hai ke assistant apne interface ke baare mein hamesha bharosemand nahi hota. Confident jawab ko asli cheez (screen ya official help page) se

check karna chahiye. Chapter ke mutabiq canvas retire ho gaya aur uska kaam ab chat ke andar writing blocks aur code blocks mein hota hai. A galat hai: dobara poochna wohi self-report hai, sirf model bada hua. B galat hai: ChatGPT mein bhi kaam chat se alag object ban jata hai, idea wohi hai. C galat hai: button ka na hona install ka masla nahi, tutorial purana hai.

Yaad rakhne wala rule: Interface ke baare mein assistant ki baat nahi, screen aur help page final hain.

Roman Urdu word-by-word samajh

- tutorial = sikhane wali guide ya video
- canvas = ChatGPT ka purana side panel
- maintenance schedule = dekh-bhaal ya marammat ka schedule
- confidently = pur-aitmaad andaz mein
- retired = band kar diya gaya
- writing blocks / code blocks = chat ke andar hi edit hone wale hisse
- help page = company ka official madad wala safha
- strongest model = sab se taqatwar model
- reinstall = app dobara lagana

Scenario ka matlab: Purane tutorial mein “canvas” likha hai, lekin button nazar nahi aa raha. ChatGPT bhi bol raha hai ke yahan hai, phir bhi nahi milta.

Exam trap: Sab se bada jaal yeh hai ke “assistant ne bola to sahi hoga”. A mein wohi jawab sirf strong model se dobara maanga ja raha hai. B ek adhi-sachi baat hai (artifacts hain), lekin “only Claude” galat hai.

Question pehchanne ke 3 role

- **Role 1 (type):** “next step” ka matlab hai pehle verify karo, phir kaam.
- **Role 2 (deciding detail):** “tutorial is from last year” aur “ChatGPT answers confidently but not visible”.
- **Role 3 (trap hatao):** Jo option assistant ko hi dobara judge banata hai (A) ya bina wajah app badalta hai (B, C), usay hatao.

QUESTION 4 OF 13

Chapter section: Concept 4, Projects (default memory vs project-only memory)

A welfare trust coordinator uses ChatGPT to prepare case summaries for two unrelated donor families, the Hashmi family and the Qureshi family. Each family has its own files and rules, and details from one must never influence answers for the other. She has not set anything up yet, and the trust also has a quarterly newsletter to finish. **How should she set this work up?**

A. Create a separate project for each family and set both to project-only memory.
B. Create two projects but keep default memory, since a project already isolates its chats.
C. Put both families in one project and write instructions telling ChatGPT never to mix them.
D. Use a temporary chat for every conversation so nothing is ever remembered.

Correct Answer: Option A

Explanation (Roman Urdu): Chapter kehta hai ke project sirf organize karta hai, aur isolation project-only memory se aata hai. Yahan ek family ki baat doosri par asar nahi daal sakti, is liye alag project aur project-only memory chahiye. B galat hai: default memory mein bahar ki wider memory bhi shamil ho sakti hai. C galat hai: ek project ek stream of work ka kamra hai, do alag streams ko ek kamre mein daalna theek nahi. D galat hai: temporary chat har dafa files aur continuity kho deta hai, aur chapter ke mutabiq isse bhi copy kuch muddat rehti hai.

Yaad rakhne wala rule: Project = organize, project-only memory = asli deewar.

Roman Urdu word-by-word samajh

- welfare trust = bhalayi ka idara
- donor family = chanda dene wala khandaan
- case summaries = har case ka khulasa
- unrelated = aapas mein na jura hua
- influence = asar daalna
- project-only memory = sirf usi project ki memory, bahar ki nahi
- default memory = aam memory jo bahar ki baatein bhi shamil kar sakti hai
- isolate = alag karna
- temporary chat = aisa chat jo history aur memory se bahar rehta hai

Scenario ka matlab: Do khandaanon ka data hai aur dono ek doosre se bilkul alag rehne chahiye. Sawal poochta hai ke setup kaise ho.

Exam trap: B sab se mazboot jaal hai: “project hai to isolation khud ba khud hai”. Nahi, default memory wider memory ko andar aane deti hai. C mein “instruction” dene se boundary nahi banti.

Question pehchanne ke 3 role

- **Role 1 (type):** “How should she set this work up?” ka matlab hai setup choose karna.
- **Role 2 (deciding detail):** “never influence the other” ka matlab hai asli boundary chahiye.
- **Role 3 (trap hatao):** Jo option sirf project bana kar ruk jata hai (B) ya ek hi room (C) rakhta hai, usay hatao.

QUESTION 5 OF 13 (SELECT TWO)

Chapter section: Concept 5, Memory and standing instructions (instructions for stable rules, memory for evolving context, projects for scoped work)

A restaurant manager uses Claude every day and wants two things. First, every answer in any chat should start with the conclusion and then give the explanation. Second, the autumn menu costing sheets and supplier terms should be available only for his autumn-menu work, which will run for several weeks. He also has the Friday staff rota to finish. **Which TWO placements are most appropriate?**

A. Put the "conclusion first" rule in his standing instructions.
B. Put the "conclusion first" rule in Memory and wait for Claude to pick it up.
C. Put the costing sheets and supplier terms in a project for the autumn menu.
D. Put the costing sheets and supplier terms in standing instructions so they apply everywhere.

Correct Answer: Option A and C

Explanation (Roman Urdu): "Conclusion first" ek stable rule hai jo har chat mein lagu hona chahiye, is liye standing instructions (A). Costing sheets ek hi stream of work ke liye hain, is liye project (C). B galat hai: memory evolving context ke liye hai, pakka rule wahan chhorna kamzor jagah hai. D galat hai: files ko instructions mein daalne se woh har kaam par lagu ho jati hain, jab ke woh sirf autumn menu ke liye chahiye.

Yaad rakhne wala rule: Pakka rule = instructions, badalta context = memory, ek kaam ki files = project.

Roman Urdu word-by-word samajh

- standing instructions = hamesha lagu rehne wali hidayat
- memory = jo assistant tumhare baare mein yaad rakhta hai
- project = ek kaam ka alag kamra
- costing sheets = lagat ka hisaab
- supplier terms = saaman dene walon ki shartein
- scoped = ek hadd tak mehdood
- conclusion first = pehle natija, phir wajah
- placements = cheez ko sahi jagah rakhna

Scenario ka matlab: Manager ke do kaam hain. Ek rule har jagah chahiye. Doosri files sirf autumn menu ke liye chahiye. Sawal poochta hai ke kaun si do cheezein sahi jagah par rakhi gayi hain.

Exam trap: B mein memory "seekh lega" wala meetha jaal hai. D mein "everywhere" lagta hai ke bohat sahulat hai, lekin scoped kaam ki files har jagah laga dena ghalat jagah hai.

Question pehchanne ke 3 role

- **Role 1 (type):** “Which TWO placements” ka matlab hai cheez ko sahi ghar mein rakhna, do sahi jore.
- **Role 2 (deciding detail):** “any chat” (stable rule) aur “only for autumn menu... several weeks” (scoped kaam).
- **Role 3 (trap hatao):** Jo option stable rule ko memory mein (B) ya scoped files ko global instructions mein (D) rakhta hai, usay hatao.

QUESTION 6 OF 13

Chapter section: Concept 5, Stored context is a responsibility (stale context fails quietly)

A cement plant sales office keeps a Claude project called “Monthly Price Quotes”. It holds a standing instruction about layout and last quarter’s price list. This month Claude produced a neatly formatted quote for a builder using last quarter’s lower prices. The error was caught before sending, so no harm was done. The manager who updates the price lists is on leave next week. **Which pattern is this, and what is the fix?**

A. Instruction problem: rewrite the layout instruction to say “always use current prices”.
B. Stale stored context: replace the old price list in project knowledge and add a monthly review of project files.
C. Memory problem: delete all memory and rebuild the work in a new project.
D. Wrong-level problem: switch to a heavier model that will notice the old prices.

Correct Answer: Option B

Explanation (Roman Urdu): Quote sahi format mein tha, lekin prices purani file se aaye. Yeh “stale context” hai, jo bina error ke chupke se galat hota hai, kyunke assistant ko pata nahi ke file purani hai. Fix hai file badalna aur monthly review (keep, correct, delete) rakhna. A galat hai: instruction purani file ko nayi nahi banati. C galat hai: yahan memory ka koi zikr nahi, sab kuch dobara banana zaroorat se bada fix hai. D galat hai: bada model bhi nahi jaanta ke file purani hai.

Yaad rakhne wala rule: Purani file ka masla = file badlo aur review ka schedule rakho.

Roman Urdu word-by-word samajh

- cement plant = cement banane ka karkhana
- sales office = bikri ka daftar
- price list = qeemton ki list
- quote = customer ko di jane wali qeemat
- builder = imarat banane wala
- standing instruction = hamesha lagu hidayat
- project knowledge = project mein rakhi files
- stale = purana, ba-asi
- on leave = chutti par

- caught before sending = bhejne se pehle pakra gaya

Scenario ka matlab: Project mein purani price list thi, is liye quote mein purane daam aaye. Format theek tha. Sawal poochta hai: yeh kaun sa masla hai aur fix kya hai.

Exam trap: A “instruction likh do” wala asaan jaal hai. D “bada model khud samajh jayega” wala jaal hai. Dono masle ko nahi, symptom ko dekhte hain.

Question pehchanne ke 3 role

- **Role 1 (type):** “Which pattern... and what is the fix” ka matlab hai masle ka naam aur uska fix dono sahi hon.
- **Role 2 (deciding detail):** “last quarter’s price list” aur “neatly formatted” (galti file mein, format mein nahi).
- **Role 3 (trap hatao):** Jo fix galat layer mein hai (A, C) ya model badalta hai (D), usay hatao.

QUESTION 7 OF 13

Chapter section: Concept 5, Incognito and temporary chats (memory-free, not trace-free)

A language school admissions officer uses a temporary chat in ChatGPT to summarize a sensitive reference letter for an applicant. A colleague says, “Temporary chats leave no trace anywhere, so you can paste anything.” The school’s policy on applicant data is strict. The officer wants to answer accurately. **Which reply is most appropriate?**

A. Agree, since a temporary chat leaves nothing stored anywhere.
B. Say it is fine because memory is off, so the data policy does not apply.
C. Say Claude’s incognito chat is stricter, so sensitive letters should go there instead.
D. Say it stays out of history and memory, but a copy is kept for a time, so policy still applies.

Correct Answer: Option D

Explanation (Roman Urdu): Chapter kehta hai ke temporary ya incognito chat history aur memory se bahar rehta hai, lekin dono vendors safety ke liye kuch muddat (takreeban 30 din) copy rakhte hain. Is liye yeh memory-free hai, trace-free nahi, aur school ki policy lagu rehti hai. A galat hai: “kuch store nahi” jhoot hai. B galat hai: memory band hone se data policy khatam nahi hoti. C galat hai: Claude ka incognito bhi copy rakhta hai, woh “zyada sakht” nahi hai.

Yaad rakhne wala rule: Temporary chat memory-free hai, trace-free nahi.

Roman Urdu word-by-word samajh

- admissions = dakhle ka shobah

- temporary chat = aisa chat jo history aur memory se bahar rehta hai
- reference letter = sifarishi khat
- applicant = darkhwast dene wala
- leave no trace = koi nishan na chhorna
- strict = sakht
- policy = idare ka usool
- retained = kuch muddat tak rakh liya jata hai
- incognito chat = Claude mein bilkul aisa hi chat

Scenario ka matlab: Ek saathi kehta hai ke temporary chat mein kuch bhi daal do kyunke nishan nahi rehta. Officer ko sahi baat batani hai.

Exam trap: "Trace nahi" wali baat sunne mein pyari lagti hai. B aur A dono usi par khade hain. C mein dusra product behtar bataya gaya, jo chapter ke khilaf hai.

Question pehchanne ke 3 role

- **Role 1 (type):** "Which reply is most appropriate" ka matlab hai sab se durust jawab chunna.
- **Role 2 (deciding detail):** "leave no trace anywhere" aur "strict policy".
- **Role 3 (trap hatao):** Jo option "kuch store nahi" (A) ya "policy lagu nahi" (B) kehta hai, usay hatao. C bhi hatao, kyunke Claude ka incognito alag nahi.

QUESTION 8 OF 13

Chapter section: Concept 6, Artifacts and writing blocks (describe what the finished thing should do and who it is for)

A hostel bookings associate asks Claude: "Build a bookings tracker." An artifact appears, but it is a generic table with no logic. The hostel has 14 rooms, front-desk staff will use the tracker, and double-booking is the biggest worry. She has a free morning. **Which change to the prompt is most appropriate?**

A. Add "make it more professional and detailed" and send it again.
B. Say what it must do and for whom: enter room and dates, warn on double-booking, for front-desk staff.
C. Ask for three alternative versions and pick the best one.
D. Send the same prompt on the heaviest model.

Correct Answer: Option B

Explanation (Roman Urdu): Chapter kehta hai "a tracker" ya "a dashboard" mat maango, balke batao ke tayyar cheez kya karegi aur kis ke liye hai. B mein kaam (room aur dates enter karna, double-booking warning) aur user (front desk) dono hain. A galat hai: "professional" jaisa

bhasha ka rang hai, koi nayi maloomat nahi. C galat hai: usi adhoori prompt ke teen versions mile ge. D galat hai: masla model ka nahi, prompt mein maloomat ki kami ka hai.

Yaad rakhne wala rule: Tool maango to batao woh kya karega aur kis ke liye.

Roman Urdu word-by-word samajh

- hostel = musafiron ke sone ka sasta thikana
- bookings tracker = reservations ka hisaab rakhne wala tool
- artifact = Claude ke side mein banne wala alag output
- generic = aam, bina khaas
- logic = andar ka hisaab-kitaab ka tareeqa
- double-booking = ek hi kamra do logon ko de dena
- front-desk staff = reception ka staff
- prompt = jo instruction aap likhte ho
- alternative = doosra option

Scenario ka matlab: Prompt bohat chhota tha, is liye table aam sa aaya. Asal zaroorat double-booking se bachna hai.

Exam trap: D "bada model" wala aadat ka jaal hai. C "aur options" wala jaal hai jo masle ko mazeed failata hai. Jab output generic ho to pehle shak karo ke aapne kya nahi bataya.

Question pehchanne ke 3 role

- **Role 1 (type):** "Which change to the prompt" ka matlab hai prompt ko theek karna, model ko nahi.
- **Role 2 (deciding detail):** "generic table with no logic" aur "double-booking is the worry".
- **Role 3 (trap hatao):** Jo option nayi maloomat nahi deta (A, C) ya model badalta hai (D), usay hatao.

QUESTION 9 OF 13

Chapter section: Concept 6, Numbers someone will act on must be computed (and check which column was used)

A hotel planning associate asks Claude to total the revenue for a conference block: 84 rooms for 3 nights at tiered nightly rates in an attached sheet. Claude replies with a total in a paragraph. This figure goes into a contract quote for the client tomorrow morning, and once signed it is hard to change. The sheet has both a "rack rate" column and a "group rate" column. **Which request is most appropriate?**

A. Ask Claude to write and run code, show it, and check which rate column it used.
B. Ask Claude to add the figures again in a new reply and accept the total if it matches.
C. Ask for the same total in a table, since a table is more reliable than a paragraph.
D. Ask Claude to run code, then accept the total, since code runs are exact.

Correct Answer: Option A

Explanation (Roman Urdu): Jo number par koi action hoga (yahan contract quote) woh "computed" hona chahiye, sirf likha hua nahi. Chapter kehta hai "write and run code, aur code dikhao". Saath hi code galat column bhi utha sakta hai (rack rate ya group rate), is liye column check karna lazmi hai. A dono kaam karta hai. B galat hai: dobara likha hua number bhi "written" hai. C galat hai: table sirf shakal badalta hai, hisaab nahi. D adha sahi hai: code chalane ke baad bhi column check na karna, chapter ke mutabiq, risk chhor dena hai.

Yaad rakhne wala rule: Jo number par kaam hoga, usay code se nikalwao aur column khud check karo.

Roman Urdu word-by-word samajh

- conference block = ek event ke liye ek saath kamron ki booking
- tiered nightly rates = raat ke daam jo slab ke hisaab se badalte hain
- rack rate = kamre ka standard (published) rate
- group rate = group ke liye kam wala rate
- contract quote = agreement ke liye qeemat
- written number = sirf likha hua figure
- computed = hisaab laga kar nikala hua
- code = chhota program jo Claude chalata hai
- column = sheet ka khana (cell ki seedhi qatar)

Scenario ka matlab: Claude ne total bata diya, lekin yeh number kal contract mein jayega. Do rate columns hain, aur galat wala uth sakta hai.

Exam trap: D sab se khatarnak hai kyunke "code exact hai" sahi lagta hai, lekin column check chhut jata hai. C mein "table zyada reliable" ek jhoota khayal hai. B dobara likha hua number hai.

Question pehchanne ke 3 role

- **Role 1 (type):** "Which request is most appropriate" ka matlab hai sahi tareeqe se number maangna.
- **Role 2 (deciding detail):** "contract quote... hard to change" aur "two rate columns".
- **Role 3 (trap hatao):** Jo option number dobara likhwata hai (B), sirf shakal badalta hai (C) ya check chhor deta hai (D), usay hatao.

QUESTION 10 OF 13

Chapter section: Concept 7, Skills and plugins (“Projects store knowledge. Skills perform tasks.”)

A subtitling studio lead repeats the same weekly job in Claude. Translators send raw notes, and Claude must check timings, apply the studio’s glossary, flag banned terms and produce a standard report. The 40-page style guide and the glossary already exist as files. Right now she pastes the steps into every new chat, which takes ten minutes each time. **How should she set this work up?**

A. Put the guide and glossary in project knowledge, and package the steps as a skill.
B. Save the glossary in Memory and keep pasting the steps into each chat.
C. Put the guide, glossary and steps all in standing instructions so they apply to every chat.
D. Package the guide and glossary as a skill and keep pasting the steps each week.

Correct Answer: Option A

Explanation (Roman Urdu): Project kya cheez rakhta hai (knowledge, yani “the what”), aur skill kaise karna hai (method, yani “the how”). Guide aur glossary reference files hain, is liye project knowledge. Har hafte dohraya jane wale steps ek method hain, is liye skill. B galat hai: memory badalte hue context ke liye hai, aur steps phir bhi paste ho rahe hain. C galat hai: standing instructions pakke chhote rules ke liye hain, 40 page guide aur poora procedure wahan rakhna ghalat layer hai. D galat hai: method abhi bhi har hafte paste ho raha hai, jab ke chapter kehta hai “when a method repeats, package the method”.

Yaad rakhne wala rule: Project = “kya” (files), Skill = “kaise” (tareeqa).

Roman Urdu word-by-word samajh

- subtitling = film ya video ke neeche likhe jane wale alfaaz
- raw notes = kachi, adhoori tarjuma ki notes
- glossary = khaas lafzon ki list
- banned terms = mana kiye gaye lafz
- style guide = likhne ka standard tareeqa
- package = ek jagah band kar dena
- skill = packaged tareeqa-e-kaar jo zaroorat par load hota hai
- project knowledge = project mein rakhi reference files
- standing instructions = hamesha lagu rules

Scenario ka matlab: Haftawar kaam ke steps wohi hain, aur files bhi maujood hain. Abhi har dafa steps paste hote hain. Sawal poochta hai ke sahi setup kya ho.

Exam trap: Teen jaal hain: memory (B), sab kuch instructions mein (C), aur files ko skill mein daalna jabke steps phir bhi paste ho rahe hain (D). Yaad rakho: jo cheez dohrai ja rahi ho woh method hai, aur method ka ghar skill hai.

Question pehchanne ke 3 role

- **Role 1 (type):** "How should she set this work up?" ka matlab hai har cheez ko sahi layer mein rakhna.
- **Role 2 (deciding detail):** "files already exist" (knowledge) aur "same steps every week, pasted manually" (method).
- **Role 3 (trap hatao):** Jo option steps ko paste karta rehta hai (B, D) ya sab kuch ek jagah thoons deta hai (C), usay hatao.

QUESTION 11 OF 13

Chapter section: Concept 8, Connectors and apps (permissions choose among actions a tool has; they do not add new ones)

A drinks bottler's distribution coordinator connects her company mailbox to Claude. She plans to have it email reminders to three retailers about overdue delivery paperwork, due by Friday. She opens the connector's details and sees that it offers "search" and "read" actions only, with no send action. She does have the authority to grant more access. **Which step is most appropriate?**

A. Grant the connector write access so Claude can send the emails.
B. Connect her personal mailbox as well, in case that connector can send.
C. Have Claude draft the three reminders from what it can read, and send them herself.
D. Ask Claude to send them anyway, and check the sent folder afterwards.

Correct Answer: Option C

Explanation (Roman Urdu): Chapter kehta hai ke connector sirf wohi kar sakta hai jo uske liye bana hai. Permissions un actions mein se chunti hain jo tool ke paas hain, naye actions nahi jodti. Yahan "send" ka action hi nahi hai, is liye sab se munasib hai ke Claude padh kar draft banaye aur coordinator khud bheje. A galat hai: write access dene se bhi send ka action paida nahi hota. B galat hai: bina sochay doosra account jodna trust aur ijazat ke sawal chhor deta hai. D galat hai: jo action maujood nahi use "phir bhi karo" kehna bekar hai, aur bhejne ke baad check karna bohat der se hai.

Yaad rakhne wala rule: Permission sirf maujooda actions mein se chunti hai, naya action nahi banati.

Roman Urdu word-by-word samajh

- distribution coordinator = saaman bhejne ka nizaam sambhalne wala
- connector = Claude ko apni app se jodne wali link
- overdue = waqt guzar chuka
- retailers = dukaandaar
- paperwork = kaghazi kaam

- actions = tool jo kaam kar sakta hai
- search / read only = sirf dhoondna aur parhna
- write access = likhne ya badalne ki ijazat
- draft = pehla maseeda

Scenario ka matlab: Connector sirf search aur read karta hai, send nahi. Coordinator ke paas ijazat dene ka haq hai, lekin masla ijazat ka nahi, action ke na hone ka hai.

Exam trap: A sab se mazboot jaal hai: "ijazat barha do to kaam ho jayega". Chapter ke mutabiq woh action nahi jodti. B aur D bhi "kisi tarah bhej do" wali soch hai.

Question pehchanne ke 3 role

- **Role 1 (type):** "Which step is most appropriate" ka matlab hai tool ki haqeeqi hadd ke andar rehna.
- **Role 2 (deciding detail):** "no send action" (isi se jawab tay hota hai).
- **Role 3 (trap hatao):** Jo option ijazat badha kar (A), doosra account jod kar (B) ya na-maujood action chala kar (D) kaam nikalna chahta hai, usay hatao.

QUESTION 12 OF 13 (SELECT TWO)

Chapter section: Concept 8, Search, thinking or research (routing the question before you send it)

A dental clinic office manager has four requests today and wants to send each to the right mode in Claude or ChatGPT. The clinic closes at 5 p.m., so she wants to avoid wasted effort. **Which TWO routings match the request to the right mode?**

A. Today's USD-to-PKR rate for an equipment invoice: research mode.
B. Comparing three whitening-package pricing options using figures she pasted: thinking mode.
C. Finding the clinic's latest approved cancellation policy: web search.
D. A cited, multi-source report on the sterilizer market: research mode.

Correct Answer: Option B and D

Explanation (Roman Urdu): B sahi hai: figures pehle se paste hain, naye information ki zaroorat nahi, bas gehri soch chahiye, yani thinking mode. D sahi hai: kai sources aur citations wali tehqeeq research mode ka kaam hai. A galat hai: ek taaza fact (exchange rate) web search se seconds mein mil jata hai, research mode bekar hai. C galat hai: clinic ki apni approved policy idare ke andar ki maloomat hai, jis ke liye workplace search ya connected apps hain, public web search nahi.

Yaad rakhne wala rule: Ek fact = search, soch = thinking, lambi cited tehqeeq = research, apne idare ki cheez = workplace search.

Roman Urdu word-by-word samajh

- route = sawal ko sahi raste par bhejna
- exchange rate = currency ka rate
- web search = ek do jagah se foran maloomat
- research mode = kai sources wala, minutes lene wala tehqeeqi mode
- thinking mode = gehri soch wala mode
- pricing options = qeemat ke tareeqe
- cited = hawale ke saath
- sterilizer = jarasim khatam karne wali machine
- cancellation policy = booking cancel karne ka usool
- workplace search / connected apps = apne idare ke andar ki cheezein dhoondna

Scenario ka matlab: Chaar alag qism ke sawal hain. Sab ko ek jaise mode par bhejna ghalat hai, har ek ka sahi mode alag hai.

Exam trap: A mein "research" bohat mehnga hathiyar hai ek chhote fact ke liye. C mein "web search" lagta hai sahi, lekin cheez clinic ki apni policy hai, public web par nahi milegi.

Question pehchanne ke 3 role

- **Role 1 (type):** "Which TWO routings match" ka matlab hai har request ka mode sahi ho.
- **Role 2 (deciding detail):** "one fact" (search), "pasted figures" (thinking), "cited multi-source" (research), "clinic's own policy" (workplace).
- **Role 3 (trap hatao):** Jo option mehnga mode chhote kaam par lagata hai (A) ya idare ki cheez web par dhoondta hai (C), usay hatao.

QUESTION 13 OF 13

Chapter section: Concept 9, Prove it on work you already know

An agricultural cooperative accountant spends two days each quarter analyzing members' delivery records and payment gaps. She wants Claude to take over the first draft of this analysis. Last quarter's raw data and her finished analysis are in her files, and she knows the correct result. The next quarter's data arrives next month. **How should she start?**

A. Run Claude on next quarter's new data and accept the analysis if the numbers look reasonable.
B. Give Claude last quarter's data and her finished analysis, and ask it to confirm it is correct.
C. Ask Claude to rate its confidence in its analysis skills, and delegate if it says high.
D. Give Claude last quarter's raw data only, hold back her analysis, and compare Claude's result with hers.

Correct Answer: Option D

Explanation (Roman Urdu): Chapter ka tareeqa hai purane kaam par test karo jiska sahi jawab tumhein pehle se maloom ho. Raw data do, apna jawab rok kar rakho, Claude se dobara banwao aur phir match karo. Is se asli bharosa milta hai, aur jahan fail ho wahan kaam insaan ke paas rehta hai. A galat hai: naye data par "theek lagta hai" ka matlab saboot nahi hai. B galat hai: jawab dikha dene se Claude uski shakal copy kar sakta hai, ye asli test nahi. C galat hai: assistant ka apne baare mein confidence dena saboot nahi.

Yaad rakhne wala rule: Pehle us kaam par parkho jiska jawab tumhein pata ho, apna jawab chhupa kar.

Roman Urdu word-by-word samajh

- cooperative = milkar kaam karne wali tanzeem
- delivery records = maal pohanchane ka record
- payment gaps = adaigi mein farq ya baqaya
- first draft = pehla kachcha maseeda
- raw data = bina process kiya hua data
- hold back = rok kar rakhna
- confirm = tasdeeq karna
- reproduce = wohi kaam dobara karna
- numbers look reasonable = figures theek lagte hain (par saboot nahi)

Scenario ka matlab: Accountant ko pata hai ke pichle quarter ka sahi jawab kya tha. Sawal poochta hai ke Claude ko kaam dene se pehle uski parakh kaise ho.

Exam trap: A mein "numbers look reasonable" ek khatarnak soch hai kyunke good-looking answer saboot nahi. B mein jawab dikha dena test ko bekar kar deta hai. C mein khud ki rating par bharosa hai.

Question pehchanne ke 3 role

- **Role 1 (type):** "How should she start?" ka matlab hai pehla sahi kadam, yani trust kaise banta hai.
- **Role 2 (deciding detail):** "last quarter's result is known" (isi par test hoga).
- **Role 3 (trap hatao):** Jo option naye data par seedha jata hai (A), jawab dikha deta hai (B) ya self-rating maangta hai (C), usay hatao.

Summary table

Q	Chapter section tested	Type
1	Concept 2: model tiers, start fast, escalate when hard	Select-two
2	Concept 3: stale chat signs and state summary	Single
3	"See it in two minutes" warning plus Concept 6: canvas retired	Single

Q	Chapter section tested	Type
4	Concept 4: project-only memory vs default memory	Single
5	Concept 5: instructions vs memory vs projects	Select-two
6	Concept 5: stale stored context	Single
7	Concept 5: temporary and incognito chats	Single
8	Concept 6: describe what the finished thing does and for whom	Single
9	Concept 6: compute numbers with code, check the column	Single
10	Concept 7: project knowledge vs skill	Single
11	Concept 8: connector actions vs permissions	Single
12	Concept 8: routing search, thinking, research, workplace search	Select-two
13	Concept 9: prove it on work you already know	Single

Questions where the chapter is thin or you should verify

1. I used only "ChatGPT & Claude Quick Reference" (it matches your URL). The Project knowledge holds nine chapters, so tell me if you meant a different one.
2. The chapter gives **three** prompt components (set the stage, define the task, set the rules), not five. So Q8 tests "describe what the finished thing should do and who it is for" instead.
3. **Q1** relies on the chapter's model names (Haiku, Sonnet, Opus). It also says thinking on Claude is a separate switch and not a model name.
4. **Q3** depends on the chapter's claim that canvas was retired in 2026 and replaced by writing blocks and code blocks. Please verify this on OpenAI's help page.
5. **Q7** depends on "around thirty days" retention for temporary and incognito chats. Verify this on both help pages.
6. **Q4** assumes "project-only memory" is a ChatGPT feature, as the chapter describes.
7. **Q12** option C relies on the line "information from your organization → workplace search or connected apps". This is a short table row in the chapter, so confirm it.

Bonus: kisi bhi question ko pehchanne ke 3 role

Role 1: Type pehchano. Question ki aakhri line dekho. "Which TWO" hai to do sahi jore chahiye. "Which pattern and fix" hai to masla aur fix dono sahi hon. "Next step" hai to pehle diagnosis, phir sab se chhota munasib kadam.

Role 2: Deciding detail pakro. Scenario mein se woh jumle dhoondo jo jawab tay karte hain: stakes (kitna nuqsan), undo ho sakta hai ya nahi, kaun check karega, pehle se kya maujood hai (project, skill, files), waqt kitna hai, aur kaun parhega. Baqi sab (coffee, rota, newsletter) sirf distraction hai.

Role 3: Trap hatao, phir chuno. Har galat option ek hi wajah se fail hota hai:

- sahi diagnosis, galat fix
- fix zaroorat se bada (naya model, naya chat, sab kuch dobara)

- fix galat layer mein (rule ko memory mein, files ko instructions mein)
- sahi kaam, galat waqt (bhejne ke baad check)
- kamzor ya adhura check (“theek lagta hai”, “code exact hai”)
- adha sahi, adha galat

Pehle har option par yeh label lagao. Jo bacha, woh sahi jawab hai. Yaad rakho ke sahi option aksar sab se chhota aur sab se seedha fix hota hai, lamba ya dikhawati nahi.
