Pehle yeh 3 Roles samajh lein (har question mein yehi lagana hai)

Role	Aap kya karte hain	Kaise
Role 1: Problem pehchano	Scenario mein asal takleef kya hai?	Dekhein: kya aap bar bar *"kaise karna hai"* samjha rahe hain (Skill)? Ya bar bar *"doosri app se data copy"* kar rahe hain (Connector)? Ya kuch galat ho raha hai (timing list)?
Role 2: Deciding detail dhoondo	Woh ek detail jo sirf ek answer ko sahi banati hai	Stakes, kya undo ho sakta hai, kaun check karta hai, pehle se kya maujood hai, kitna time hai.
Role 3: Wrong option ka trap pehchano	Har galat option kyun galat hai?	Aksar: sahi diagnosis, ghalat fix, ya zaroorat se bara fix (naya chat, dobara likhna), ya ghalat layer, ya ghalat waqt.

Exam mein hamesha ek chhota fix sahi hota hai. Jo option "sab kuch dobara banao" kehta hai, woh aksar trap hota hai.

QUESTION 1 OF 13
Chapter section: Skill vs Connector vs Project vs Custom instructions (section 4)

Hira manages a restaurant and writes supplier order emails every Friday. Each time she pastes the same six rules into a new chat: polite-but-firm tone, a 6–8 am delivery window, a product-code abbreviation list, and three more. Only the supplier name and quantities change. She also uses Claude for menu brainstorming and staff rosters in other chats, where these six rules make no sense. She has a Project called "Kitchen 2026" that holds the menu files. What is the most appropriate way to set this up?

A. Add the six rules to Custom instructions so they apply in every chat.
B. Save the six rules as a file inside the Kitchen 2026 Project knowledge.
C. Build a Skill whose description names "supplier order email" and holds the six rules.
D. Keep a note with the six rules and paste it at the start of each Friday chat.

Correct Answer: Option C

Roman Urdu samajh (scenario):

"Pastes the same six rules every time" = har baar wohi 6 rules copy-paste karti hai. Yeh "main bar bar kaise karna hai samjha raha hoon" wali takleef hai, yaani Skill ka signal.

"Only supplier name and quantities change" = sirf input badalta hai, tareeqa wohi rehta hai. Yeh Skill ki pehchan hai.

"Other chats where these rules make no sense" = doosre chats mein yeh rules lagne nahi chahiye. Is liye sab chats par lagne wali cheez (Custom instructions) galat hai.

"Project Kitchen 2026" = yeh sirf distraction hai. Project hamesha on rehta hai.

Question line: "How should she set this up?" = sahi jagah (layer) chunni hai.

Explanation: Yeh ek repeatable task hai jo sirf ek jagah chalta hai (supplier email) aur sirf input badalta hai. Chapter ke mutabiq aisi procedure jo demand par chale, Skill mein jati hai. Option A galat hai kyunke Custom instructions har chat par lagte hain, aur menu/roster chats mein yeh rules bigar denge. Option B galat hai kyunke Project hamesha on rehta hai (standing knowledge ke liye), on-demand procedure ke liye nahi. Option D galat hai kyunke yeh wohi purani takleef hai: bar bar paste karna, kuch hal nahi hua.

Exam trap: Option A "ek baar likho, sab jagah chalega" jaisa lagta hai. Lekin "sab jagah" ka matlab hai doosre tasks bhi bigar sakte hain.
3 Role: (1) Bar bar "kaise" samjhana = Skill. (2) Deciding detail = "doosre chats mein rules galat". (3) A = bohot wide, B = hamesha on, D = kuch badla hi nahi.
Yaad rakhne wala rule: Standing knowledge = Project. Ek task ka tareeqa = Skill. Har chat ki aadat = Custom instructions.

QUESTION 2 OF 13
Chapter section: The description field is the whole game (section 12)

Bilal is a hostel bookings associate. He built a skill called "booking-confirmation" whose instructions are clear (guest name, room, check-in time, house rules), but its description says only "Helps with bookings." When he types "Send the confirmation for room 4B," Claude writes a short generic reply and ignores the house rules. The skill is switched on in his list. His colleague's skills in other chats work fine. Which change to the skill is most appropriate?

A. Rewrite the description to say what it does, when to use it, and the exact phrases he says, such as "booking confirmation."
B. Expand the instruction body with more detail about every house rule and guest type.
C. Start a fresh chat and repeat the same request in two clear lines.
D. Move the house rules into Custom instructions so Claude always reads them.

Correct Answer: Option A

Roman Urdu samajh (scenario):

"Instructions are clear" = andar ke instructions theek hain. Matlab masla andar nahi hai.

"Description says only 'Helps with bookings'" = description bohot vague hai. Yahi asal ghalti hai.

"Ignores the house rules" = skill chala hi nahi (fire nahi hui).

"Switched on" = skill on hai, to masla on/off ka nahi.

Question line: "Which change… is most appropriate?" = sab se chhota sahi fix.

Explanation: Claude description dekh kar faisla karta hai ke skill kholni hai ya nahi, instructions padh kar nahi. Vague description ka matlab skill kabhi start nahi hoti. Timing list mein "never fires" ka fix hai: description mein woh alfaaz daalo jo aap bolte ho. Option B galat hai: instructions pehle se clear hain, aur skill load hi nahi ho rahi. Option C galat hai: chat lamba nahi hai, masla shuru se hai. Option D galat hai: house rules sirf bookings ke liye hain, sab chats par lagana zaroorat se bara aur ghalat layer hai.

Exam trap: Option B "aur detail daalo" sab se natural lagta hai. Lekin jo cheez load hi nahi hoti, uski body behtar karna bekar hai.
3 Role: (1) "Skill chali hi nahi" = description problem. (2) Deciding detail = "instructions clear, description vague". (3) B = right area ghalat jagah, C = timing ghalat, D = ghalat layer.
Yaad rakhne wala rule: Skill start nahi hoti? Description theek karo: kya karti hai + kab + exact phrases.

QUESTION 3 OF 13 — SELECT TWO
Chapter section: Test, then iterate: the timing list (section 13)

An operations associate at an ice rink is maintaining a "shift-handover" skill. She lists four problems her team reported, with a proposed fix for each. Which TWO changes match a signal to its fix?

A. The skill starts on unrelated quick questions, such as the rink temperature. Fix: narrow the description and add a "Do NOT use for…" line.
B. Output is right at first but drops the format as a chat grows long. Fix: rewrite the SKILL.md with stricter wording.
C. The same arithmetic mistake appears every run, even after wording was tightened. Fix: ask skill-creator to move the sum into a small program.
D. The skill used to work and now does not. Fix: delete it and rebuild it from scratch.

Correct Answer: Option A and C

Roman Urdu samajh (scenario):

"Match a signal to its fix" = har alamat (symptom) ko uske sahi ilaaj se milao.

Chaar problems hain, aur har ek ke saath ek fix likha hai. Aapko dekhna hai kaun sa jodi (pair) sahi hai.

"Select two" = bilkul do jawab chunne hain.

Question line: "Which TWO…" = do sahi chuno.

Explanation: A sahi hai: "wrong things par start hoti hai" ka fix description ko narrow karna ya negative trigger lagana hai. C sahi hai: "wohi ghalti har run, wording tight karne ke baad bhi" ka matlab hai exact step (hisab) galat jagah hai, aur use program mein hona chahiye. B galat hai: "pehle theek, chat lamba hone par kharab" ka fix fresh chat hai, file badalna nahi. D galat hai: "pehle chalti thi ab nahi" ka matlab hai skill ke aas-paas kuch badla (threshold, template), to purani skill ko naye tareeqe se compare karo, sab kuch delete nahi.

Exam trap: B aur D mein "dobara likho/dobara banao" wali bari fix hai, jabke sahi fix chhota hai (fresh chat, ya update).
3 Role: (1) Har signal ka timing type pehchano. (2) Deciding detail = "grow hota chat", "har run same ghalti". (3) B, D = zaroorat se bara ya ghalat fix.
Yaad rakhne wala rule: Chat lamba = naya chat. Har run same ghalti = step program mein. Galat jagah start = description narrow.

QUESTION 4 OF 13
Chapter section: Part 5, the safe-use checklist (connector scope and read-only)

A quality lead at a drinks bottling plant wants Claude to summarize last week's line-rejection reports. The reports sit in one Drive folder called "Line2-Rejections." The shared company Drive also holds payroll sheets and supplier contracts. She has never used a connector before and the plant's reports are due Monday. Which request is most appropriate?

A. Connect the whole Drive with write access so Claude can also file the summaries.
B. Connect the whole Drive as read-only so Claude can find reports wherever they are.
C. Connect Drive with write access to that folder only so Claude can tidy the files.
D. Connect Drive as read-only, scoped to that folder, and ask only for search and summary.

Correct Answer: Option D

Roman Urdu samajh (scenario):

"One Drive folder" = kaam sirf ek folder ka hai.

"Payroll and contracts in the same Drive" = baqi Drive mein hassas cheezein hain. Isi liye scope chhota rakhna hai.

"Never used a connector" = pehli baar hai, to trust abhi nahi bana. Pehle read-only.

"Due Monday" = time ka dabao, lekin yeh sirf distraction hai.

Question line: "Which request is most appropriate?"

Explanation: Chapter kehta hai: naya connector read-only se shuru karo, aur scope sirf utna rakho jitna kaam ko chahiye ("scope is safety"). D dono shartein poori karta hai: read-only aur sirf ek folder. A galat hai: poori Drive aur write dono bohot zyada. B galat hai: read-only hai magar poori Drive, jahan payroll bhi hai. C galat hai: folder chhota hai magar write access trust banne se pehle de diya, aur kaam sirf summary ka hai.

Exam trap: B aur C "half right" hain. Ek shart poori, doosri toot gayi. Dono shartein ek saath dekhni hain.
3 Role: (1) Connector ka access/safety sawal. (2) Deciding detail = "pehli baar" + "baqi Drive hassas". (3) A = dono galat, B = scope wide, C = write jaldi.
Yaad rakhne wala rule: Naya connector = read-only + sab se chhota scope. Write access tab jab tool achha behave kare.

QUESTION 5 OF 13
Chapter section: Timing list: "same mistake every run" (section 13)

A carpentry estimator uses a "quote-builder" skill. Every run, the skill adds the 15% margin sometimes before and sometimes after the labour total, so the quote differs by a few hundred rupees. She has tightened the wording twice ("always add margin last") and the error returns. The chats are short and the skill was built last week. Which change is most appropriate?

A. Tighten the wording a third time and write the margin rule in capital letters.
B. Ask skill-creator to move the margin calculation into a small program in the skill.
C. Start a fresh chat for every quote so the skill is read from a clean start.
D. Switch to a more powerful model so the order of steps is followed correctly.

Correct Answer: Option B

Roman Urdu samajh (scenario):

"Sometimes before, sometimes after" = hisab ka order har baar badal jata hai.

"Tightened twice and the error returns" = wording theek karne se kuch nahi hua.

"Short chats, built last week" = chat lamba nahi aur skill purani nahi. Is liye "context overload" aur "stale" nahi hai.

Question line: “Which change… is most appropriate?”

Explanation: Chapter mein “wohi ghalti har run, wording tight karne ke baad bhi” ka matlab hai ke yeh step galat jagah hai. Exact step jaise sum ya threshold check chhote program mein hona chahiye, kyunke code exact hota hai aur jumla har baar thora alag parha jata hai. Option A tisri koshish hai wohi cheez jo do baar fail ho chuki. Option C galat hai: chats pehle se short hain, to yeh masla nahi. Option D galat hai: chapter mein model badalna is masle ka fix nahi, aur yeh bara aur mehnga fix hai.

Exam trap: A “aur zyada zor se likho” natural lagta hai. Lekin do baar fail ho chuka, to teesri baar bhi fail hoga.
3 Role: (1) “Har run same ghalti” = step ghalat jagah. (2) Deciding detail = “wording do baar tight kiya”. (3) A = wohi fix dobara, C = ghalat cause, D = bara fix.
Yaad rakhne wala rule: Sum, threshold, margin jaise exact step = chhota program, jumla nahi.

QUESTION 6 OF 13 — SELECT TWO
Chapter section: Part 5, malicious skills and the safe-use checklist

An editor at a subtitling studio finds a free “subtitle-polish” skill zip on a social media thread with thousands of likes. Chats at the studio have the Drive connector switched on, and the Drive holds client scripts under NDA. A deadline is tomorrow. Which TWO actions are most appropriate before he enables it?

A. Enable it now and watch its behaviour for a week, removing it if anything looks odd.
B. Ask Claude to read the skill and say exactly what it instructs, flagging external servers, credentials and data leaving.
C. Trust it because the likes are high and the description reads professionally.
D. Check whether the official directory already offers a trusted skill for this job and install that one instead.

Correct Answer: Option B and D

Roman Urdu samajh (scenario):

“Free zip from social media” = anjaan source. Yeh warning sign hai.

“Drive connector on, scripts under NDA” = Skill ke paas scope ka dial nahi hota. Woh wohi sab dekh sakti hai jo is chat ko dikhta hai, yaani NDA scripts bhi.

“Deadline tomorrow” = jaldi ka dabao. Jaldi mein check na chhodo.

“Select two” = do sahi.

Explanation: B sahi hai: enable karne se pehle skill ko parho ya Claude se audit karwao (kya server ko contact karti hai, credentials, data bahar jana). D sahi hai: safe default

built-in aur official directory hai, trusted source se install karo. A galat hai: “enable karke dekhte hain” matlab access pehle de diya, risk baad mein samjha. C galat hai: likes aur professional description safety ka saboot nahi, malicious skill bhi achhi dikh sakti hai.

Exam trap: A “thori nigrani” jaisa responsible lagta hai. Lekin chapter kehta hai: access dene se pehle samjho, baad mein nahi.
3 Role: (1) Safety sawal, Skill ka risk. (2) Deciding detail = NDA data + anjaan source. (3) A = ghalat waqt, C = kamzor/ghalat saboot.
Yaad rakhne wala rule: Skill enable karne se pehle parho, aur trusted source se lo. Skill ka scope dial nahi hota.

QUESTION 7 OF 13
Chapter section: Which problems need a Skill, which need a Connector, which need both (section 9)

Every Monday an admissions officer at a language school copies new inquiries from Gmail into a chat, then re-explains the reply format each time: greeting, three course options, fee line, closing. She only wants drafts to review, never automatic sending. A colleague suggests keeping a Project with the template and continuing to paste the emails. Which pattern is this, and what is the fix?

A. Both: a read-only Gmail connector to fetch inquiries and a skill for the reply format.
B. Both: a Gmail connector with send permission and a skill so replies go out directly.
C. Skill only: write the reply format as a skill and keep pasting the emails herself.
D. Neither: this is a good prompt that she should save and reuse each Monday.

Correct Answer: Option A

Roman Urdu samajh (scenario):

“Copies inquiries from Gmail” = doosri app se data copy kar rahi hai = Connector ka signal.

“Re-explains the reply format” = har baar tareeqa samjha rahi hai = Skill ka signal.

“Only drafts, never sending” = write access ki zaroorat nahi, to read-only.

“Colleague suggests Project” = distraction, kyunke yeh phir paste wali takleef nahi hatata.

Question line: “Which pattern is this, and what is the fix?” = pehle pattern (dono), phir fix.

Explanation: Do takleefein hain, is liye dono chahiye. Chapter ka test: “bar bar kaise samjhana = Skill; bar bar app se copy = Connector.” Kyunke sirf draft chahiye, Gmail ko

read-only rakhna sahi hai. B galat hai: send permission ki zaroorat nahi aur trust se pehle write access risky hai. C galat hai: paste karna wali Gmail takleef waisi hi rahi. D galat hai: yeh har hafte repeat hota hai aur do alag takleefein hain, ek saved prompt kafi nahi.

Exam trap: B pattern theek pakadta hai ("dono") lekin fix mein write access daal deta hai. Right diagnosis, ghalat fix.
3 Role: (1) Do friction = Both. (2) Deciding detail = "only drafts". (3) B = zyada permission, C = adhura, D = pattern ghalat.
Yaad rakhne wala rule: Kaise = Skill. Kahan se data = Connector. Dono takleef = dono. Draft ho to read-only.

QUESTION 8 OF 13
Chapter section: Using a connector with real data (section 7) and the safe-use habit

A caseworker at a welfare trust wants to try a connector workflow that summarizes beneficiary case files from Drive into a standard template. The real files contain names and medical notes. The trust has approved only certain accounts, and she has not confirmed whether hers is one of them. She has never run this workflow before. What is the most appropriate next step?

A. Try it on a few real files in her personal Claude account, since the workflow only reads files.
B. Remove the names and run it on the real files first to see if the template works.
C. Build and test the workflow on invented demo files, and use real files only through an approved account.
D. Wait until the skill is perfect on paper, then run it on the real files for the first time.

Correct Answer: Option C

Roman Urdu samajh (scenario):

"Real names and medical notes" = hassas, regulated data.

"Trust approved only certain accounts" = sirf manzoor shuda accounts istemal ho sakte hain.

"Not confirmed" = abhi pata nahi uska account manzoor hai ya nahi.

"Never run this before" = pehli baar, to pehle practice.

Explanation: Chapter kehta hai: practice made-up data par karo (jaise DEMO files), aur jab data asli ho (healthcare, legal, student records) to sirf wohi accounts jo organization ne approve kiye. C dono baatein poori karta hai. A galat hai: "sirf read karta hai" kehne se personal account approved nahi ho jata. B galat hai: naam hataane

ke baad bhi medical notes asli aur hassas hain, aur account abhi bhi unconfirmed hai. D galat hai: “perfect hone tak intezar” test ka kaam hi nahi karta, test invented data par ho sakta hai.

Exam trap: B responsible lagta hai (“naam to hata diye”). Lekin account approval ka sawal wahin ka wahin hai.
3 Role: (1) Data-safety sawal. (2) Deciding detail = “account approved nahi + asli medical data”. (3) A = ghalat account, B = adhura control, D = test ka tareeqa ghalat.
Yaad rakhne wala rule: Practice = banawati (made-up) data. Asli data = sirf approved account.

QUESTION 9 OF 13
Chapter section: Saving and sharing your skill (section 14)

A planning associate at a hotel built a “banquet-quote” skill. She wants her 12 colleagues to use the same skill, and she wants her later improvements to reach them automatically. The company is on a Team plan, but she cannot see a sharing option. The banquet season starts in two weeks. Which approach is most appropriate?

A. Email the skill zip to each colleague so they can upload it to their own account.
B. Ask each colleague to copy the instructions into their own Custom instructions.
C. Ask each colleague to build their own version with skill-creator from her description.
D. Ask an owner to enable sharing, then share it with named colleagues or publish it to the organization directory.

Correct Answer: Option D

Roman Urdu samajh (scenario):

“Same skill for 12 colleagues” = sab ke liye ek jaisa standard.

“Improvements reach them automatically” = update khud pahunchna chahiye.

“Team plan, cannot see sharing” = sharing option owner ko on karna padta hai.

“Two weeks” = waqt hai, to sahi tareeqa apna sakti hai.

Explanation: Chapter ke mutabiq Team ya Enterprise plan par skill named colleagues ke saath share ya organization directory mein publish ho sakti hai. Shared skills view-only hoti hain aur original badalne par khud update ho jati hain. Sharing by default band hoti hai, pehle owner on karta hai. A galat hai: zip bhejne se har copy alag ho jati hai aur update nahi pahunchte, aur chapter team ke liye directory ko behtar kehta hai. B galat hai: Custom instructions har chat par lagte hain, skill ka kaam nahi. C galat hai: 12 alag versions banenge, standard toot jayega.

Exam trap: A sab se aasaan lagta hai. Lekin “automatic update” ki shart sirf D poori karta hai.
3 Role: (1) Sharing/standardization. (2) Deciding detail = “improvements automatically”. (3) A = copies alag, B = ghalat layer, C = standard nahi.
Yaad rakhne wala rule: Team skill = owner sharing on kare, directory/named share. View-only aur auto-update.

QUESTION 10 OF 13 — SELECT TWO
Chapter section: Skill vs Connector vs Project vs Custom instructions (section 4 and section 9)

A sales associate at a cement plant is organizing four needs. Which TWO placements are correct?

A. A dealer price list that every dealer-quote chat needs. Place it in Project knowledge.
B. The rule “always reply in the language I write in.” Place it in a Skill.
C. An eight-section board paper structure used only on request. Place it in Custom instructions.
D. Monthly dealer figures kept in an Excel file on Drive that she keeps copying into chats. Place them behind a Connector.

Correct Answer: Option A and D

Roman Urdu samajh (scenario):

“Four needs, four placements” = chaar cheezein hain, har ek ko ek jagah (layer) di gayi hai.

“Which TWO correct” = do jodi sahi hain, do ghalat.

Har option ko test karo: Kya hamesha on? (Project) Kya sab chats ki aadat? (Custom instructions) Kya demand par tareeqa? (Skill) Kya doosri app se data? (Connector)

Explanation: A sahi hai: price list ek body of work ka standing context hai, jo hamesha load honi chahiye, yaani Project. D sahi hai: Drive se bar bar copy karna Connector ki takleef hai. B galat hai: “hamesha meri zaban mein jawab do” sab chats ki aadat hai, yeh Custom instructions ka kaam hai, Skill ka nahi. C galat hai: board paper ka structure sirf maangne par chahiye, yeh demand par chalne wali procedure hai, yaani Skill, Custom instructions nahi.

Exam trap: B aur C mein layer ulti hai (Skill aur Custom instructions aapas mein badal diye gaye). Dono “similar” lagte hain lekin ek sab jagah, ek sirf ek task ke liye.
3 Role: (1) Har cheez ki qisam pehchano. (2) Deciding detail = “hamesha”, “sirf maangne par”, “copy”. (3) B, C = ghalat layer.

Yaad rakhne wala rule: Hamesha on = Project. Har chat ki aadat = Custom instructions. Demand par tareeqa = Skill. Doosri app ka data = Connector.

QUESTION 11 OF 13
Chapter section: Timing list: “right at first, worse as the chat grows” (section 13)

A zoo education officer uses a “worksheet-maker” skill. For the first six worksheets in one chat, the output was perfect. By the 45th message of the same chat, the worksheets lost the answer-key section and the grade level. The SKILL.md has not been changed since last week, and in new chats it works correctly. What is the most appropriate next step?

A. Rewrite the SKILL.md with stricter rules about the answer key and the grade level.
B. Start a fresh chat and restate the task in two lines.
C. Narrow the description so the skill only starts on “worksheet” requests.
D. Ask skill-creator to move the formatting into a small program.

Correct Answer: Option B

Roman Urdu samajh (scenario):

“Perfect at first, lost sections by message 45” = shuru mein theek, chat lamba hone par kharab.

“SKILL.md not changed” = skill file theek hai.

“In new chats it works” = naye chats mein theek chalti hai. Matlab masla chat ki lambai ka hai.

Explanation: Chapter ka signal hai: “pehle theek, chat barhne ke saath kharab” = AI lamba chat mein track kho deta hai. Skill theek hai, file mat badlo, naya chat shuru karo aur task do line mein dobara likho. A galat hai: file pehle se theek hai, naye chats mein chal rahi hai. C galat hai: skill start ho rahi hai, start hone ka masla nahi. D galat hai: yeh “har run same ghalti” wala case nahi, yeh sirf lambe chat ke baad hota hai.

Exam trap: A “rules zyada sakht karo” sab se pehle zehn mein aata hai. Lekin evidence kehta hai file theek hai aur naye chat mein chalti hai.
3 Role: (1) Timing = chat ke saath bigarna. (2) Deciding detail = “new chats mein theek”. (3) A, C, D = file/description/code badalna, jabke masla chat ka hai.
Yaad rakhne wala rule: Pehle theek phir kharab = naya chat. Skill file mat chhedo.

QUESTION 12 OF 13
Chapter section: Timing list: “used to work, now does not” (section 13)

A veterinary clinic's "consent-summary" skill worked well for months. In January the clinic changed its consent form template and raised the fee threshold that triggers a written estimate. Since then the skill still produces the old layout and flags the old threshold. Nobody has edited the skill file, and chats are short. What is the most appropriate next step?

A. Read the skill again against how the clinic works today and update the stale template and threshold.
B. Delete the skill and rebuild it from scratch with skill-creator.
C. Switch the connector to a different Drive account to refresh what it reads.
D. Start a fresh chat for every consent summary so the skill reloads.

Correct Answer: Option A

Roman Urdu samajh (scenario):

"Worked for months" = pehle theek chalti thi.

"Template and threshold changed in January" = clinic ka tareeqa badal gaya.

"Nobody edited the skill" = skill file wohi purani hai.

"Chats are short" = lamba chat wala masla nahi.

Explanation: Chapter kehta hai: "pehle chalti thi, ab nahi" ka matlab hai skill nahi badli, uske aas-paas kuch badla (threshold, template, team ka tareeqa). Aur koi warning nahi aati jab skill purani ho jaye. Fix yeh hai ke skill ko aaj ke tareeqe ke mutabiq dobara parho aur purane hisse update karo. B galat hai: poori skill delete karna zaroorat se bara hai, sirf do cheezein purani hain. C galat hai: connector ka koi zikr nahi aur masla data ka nahi. D galat hai: chats short hain aur naya chat purani skill ko naya nahi bana sakta.

Exam trap: B "naye sire se banao" saaf-suthra lagta hai. Lekin chhota update kafi hai.
3 Role: (1) "Pehle chalti thi" = stale. (2) Deciding detail = "January mein cheezein badli". (3) B = bara fix, C = ghalat cause, D = ghalat cause.
Yaad rakhne wala rule: Pehle chalti thi ab nahi = skill nahi badli, duniya badli. Skill ko aaj ke tareeqe se compare karke update karo.

QUESTION 13 OF 13
Chapter section: The skills that come built in (section 6)

A courier company's dispatch coordinator asks Claude to prepare a PowerPoint about last month's delivery times. Claude replies with text only and no file. She opens Customize, then Skills, finds only "skill-creator," and concludes that the PowerPoint

skill is missing. Her manager needs the deck this afternoon. What is the most appropriate next step?

A. Download a free PowerPoint skill from a community site and upload it.
B. Build her own PowerPoint skill with skill-creator.
C. Check Settings, then Capabilities, and switch on “Code execution and file creation,” because the document skills are not listed under Skills.
D. Add a Google Slides connector so Claude can create the deck there.

Correct Answer: Option C

Roman Urdu samajh (scenario):

“Replies with text only, no file” = file nahi bani, sirf likha hua jawab aaya.

“Only skill-creator in Skills list” = list mein sirf ek skill hai, aur woh normal hai.

“Concludes the skill is missing” = uska nateeja ghalat hai.

“Needed this afternoon” = jaldi chahiye, to sab se seedha fix chuno.

Explanation: Chapter ke mutabiq Word, PowerPoint, Excel aur PDF skills built-in hain aur “Code execution and file creation” switch par chalti hain. Woh Skills ki list mein nahi dikhti, yeh bug nahi hai. Switch band ho to file nahi banegi. A galat hai: anjaan source se skill lena risky hai aur zaroorat hi nahi. B galat hai: apni skill banana bara kaam hai aur asal masla (switch band) wahin rahega. D galat hai: connector access hai, jabke yahan file banane ki capability band hai.

Exam trap: B aur A “skill missing hai to nayi lo/banao” se bhatkate hain. List mein na dikhna “missing” hona nahi hai.
3 Role: (1) Capability/setting masla. (2) Deciding detail = “list mein sirf skill-creator” jo normal hai. (3) A = unsafe source, B = bara fix, D = ghalat cheez.
Yaad rakhne wala rule: File nahi bani? Pehle Settings > Capabilities mein “Code execution and file creation” check karo.

Summary table

Q	Chapter section tested	Type
1	Skill vs Project vs Custom instructions	Single
2	Description field (never fires)	Single
3	Timing list: matching signal to fix	Select two

Q	Chapter section tested	Type
4	Connector: read-only and smallest scope	Single
5	Timing list: same mistake every run, move to program	Single
6	Malicious skills and safe-use checklist	Select two
7	Skill vs Connector vs Both	Single
8	Real data, demo files, approved accounts	Single
9	Saving and sharing skills (Team plan)	Single
10	Placement: Project, Skill, Custom instructions, Connector	Select two
11	Timing list: worse as chat grows	Single
12	Timing list: used to work, now does not	Single
13	Built-in skills and the capabilities switch	Single

Jahan aap khud verify karein

Q1: Chapter kehta hai Project “always on” hota hai aur Skill demand par chalti hai. Meri option B ki wajah (Project on-demand procedure ke liye nahi) isi se nikali hai. Chapter ne is exact example ka zikr nahi kiya.

Q4: Chapter connector ke liye “scope” aur “read-only pehle” dono kehta hai. Maine inhe ek saath jod kar sahi jawab banaya hai.

Q6: “Official directory se lo” aur “enable karne se pehle parho” dono checklist ke alag items hain. Dono sahi rakhe gaye hain, aur A aur C dono saaf galat hain.

Q10: “Price list = Project” chapter mein seedha nahi likha, “standing knowledge belongs in a Project” se nikala gaya hai. Option D ka “Excel on Drive” Connector wali friction hai.

Q12: Chapter sirf “skill ko aaj ke tareeqe se dobara parho” kehta hai. “Update the stale parts” is ka seedha natija hai.
