QUESTION 1 OF 13
Chapter section: Idea 1, it predicts the next piece and never looks facts up
Hira is a restaurant manager. She asks AI for the opening hours and monthly fee of a tiny tuition centre near her restaurant that has no website and almost no online presence. AI returns a neat table of hours and fees in a confident tone. She wants to print the table on a notice for her staff's children this evening. What is the most appropriate next step?
A. Print it, because the table is neatly formatted and sounds sure.
B. Treat the figures as a likely guess, and confirm them with the centre itself before printing.
C. Ask AI "are you sure?" and print if it says yes.
D. Ask AI to spell out the same table letter by letter to prove it is correct.
Correct Answer: Option B
Explanation (Roman Urdu): Centre online bohat kam tha, is liye AI ke paas sach predict karne ke liye kuch tha hi nahi aur usne "sab se mumkin" fees bana di. Chapter kehta hai ke rare topic par model confident andaza deta hai aur andar koi checker nahi, is liye check aap ka kaam hai. Centre se direct confirm karna sahi hai. A galat hai: neat aur sure lagna sach hone ka saboot nahi. C galat hai: "are you sure?" ka jawab bhi wohi prediction machine deti hai. D galat hai: letter by letter spelling ka sach se koi taluq nahi.
Yaad rakhne wala rule: Rare topic par AI ka confident jawab andaza hai, asli source se check karo.

Roman Urdu samajh (scenario aur question):

- Scenario: "Hira restaurant manager hai. Wo AI se ek chhoti tuition centre ke khulne ke auqaat aur mahana fees puchti hai jis ki website nahi aur online maujoodgi na ke barabar hai. AI confident lehje mein saaf table deta hai. Wo aaj shaam staff ke bachon ke liye notice par chhapna chahti hai."
- Question: "Sab se munasib agla qadam kya hai?"
- Key words: tuition centre = parhai ka chhota idara, confident = yaqeen se bhara, notice = ittela, confirm = tasdeeq karna.
  Exam trap aur 3 clues:

1. Deciding detail: "no website, almost no online presence", yaani training mein is ka text tha hi nahi.
2. Question kya maang raha hai: agla sahi kaam.
3. Trap: A (neat aur sure lagna) aur C (AI se dobara puchna), dono mein asli check nahi hota.

QUESTION 2 OF 13
Chapter section: Idea 2, frozen weights: correcting the model does not teach it
Bilal is a hostel bookings associate. Last week he corrected AI in one chat: the hostel's check-in time is 2 p.m., not 3 p.m. AI replied "you're right, my mistake". Today he opened a new chat, asked about check-in time, and AI said 3 p.m. again. Memory

features are switched off, and a guest is waiting for the answer. Which pattern is this, and what is the fix?
A. The model learned badly; correct it more times so it sticks.
B. The model forgot because the chat was too long; shorten the old chat.
C. The correction only lived in the old chat's context; put the check-in time in the new chat's prompt.
D. The model is broken; switch to a different product before answering.
Correct Answer: Option C
Explanation (Roman Urdu): Chapter kehta hai ke model ke weights training ke baad freeze ho jate hain, is liye correction sirf us chat ke context window mein kaam karti hai. Naye chat mein wo nahi hoti, is liye sahi time naye prompt mein khud likho. A galat hai: kitni bhi dafa correct karo, weights nahi badalte. B galat hai: masla lambe chat ka nahi, naye chat ka hai. D galat hai: ye khrabi nahi, model ki design hai.
Yaad rakhne wala rule: Correction sirf us chat mein chalti hai, naye chat mein baat dobara likho.

Roman Urdu samajh (scenario aur question):

- Scenario: "Bilal hostel mein bookings associate hai. Pichle hafte usne ek chat mein AI ko theek kiya: check-in 2 baje hai, 3 baje nahi. AI ne kaha 'aap sahi hain'. Aaj naye chat mein usne phir puchha aur AI ne dobara 3 baje bataya. Memory band hai aur ek mehmaan jawab ka intezar kar raha hai."
- Question: "Ye kaun sa pattern hai aur fix kya hai?"
- Key words: correction = ghalti ki islah, frozen = jama hua/na badalne wala, context window = jo text model dekhta hai, memory = product ka saved note. Exam trap aur 3 clues:

1. Deciding detail: "new chat" aur "memory off".
2. Question kya maang raha hai: do cheezein, pattern aur fix.
3. Trap: A kyun ke "baar baar sikhao" insani soch lagti hai, magar model sikhta nahi.

QUESTION 3 OF 13
Chapter section: Idea 3, no truth-checker inside the model; hallucination
Sana works at a subtitling studio and asks AI for three peer-reviewed studies, with authors and years, on subtitle reading speed. She will paste them into a client proposal due tomorrow morning. The three citations look completely real and each has a year and author names. What is the most appropriate next step?
A. Use them, since all three include authors and years.
B. Ask AI to mark which citations it invented.
C. Trust the two that sound most familiar and drop the third.
D. Look up each study yourself before using any of them.
Correct Answer: Option D
Explanation (Roman Urdu): Chapter kehta hai ke model ke andar sach check karne ka koi hissa nahi, aur invented citation bhi asli jaisi awaz mein aati hai. Isliye har study ko

khud dhoondna zaroori hai, aur proposal client ko jayegi. A galat hai: authors aur year bhi bana diye ja sakte hain. B galat hai: model khud nahi jaanta kaun bana hua hai, uske paas checker nahi. C galat hai: “familiar lagna” bhi sach hone ka saboot nahi.
Yaad rakhne wala rule: Citations awaaz se nahi, khud dhoondh kar check hoti hain.

Roman Urdu samajh (scenario aur question):

- Scenario: “Sana subtitling studio mein kaam karti hai. Wo AI se subtitle reading speed par teen peer-reviewed studies authors aur saal ke saath maangti hai. Wo kal subah client proposal mein paste karegi. Teeno citations bilkul asli lagti hain.”
- Question: “Sab se munasib agla qadam kya hai?”
- Key words: peer-reviewed = maahiron ne jaanch kar chhapi hui, citation = hawala, invented = banai hui, proposal = tajweez.
  Exam trap aur 3 clues:

1. Deciding detail: “look completely real” aur client proposal.
2. Question kya maang raha hai: sahi agla kaam.
3. Trap: B kyun ke AI se puchna asaan lagta hai, par checker AI ke andar hai hi nahi.

QUESTION 4 OF 13 SELECT TWO
Chapter section: Idea 4, tokens; the strawberry problem and typos
Imran is an operations associate at an ice rink. He asks AI to count how many times the letter “e” appears in a 60-word safety notice, and the count looks wrong. Earlier the same day his prompt contained the typo “definately” and the answer was fine. The notice is going on the wall tomorrow. Which TWO statements are most appropriate?
A. The model reads chunks, not letters, so exact letter counting is unnatural for it.
B. He should spend time fixing typos in prompts, because they confuse the model.
C. Asking it to spell the text out one piece at a time makes the count more reliable.
D. A longer reply will count the letters more accurately.
Correct Answer: Option A and C
Explanation (Roman Urdu): Chapter ke mutabiq model tokens (chunks) parhta hai, letters nahi, is liye letter-level counting uske liye naturl nahi (A). Jab usay ek ek piece spell karne par majboor karo to count behtar hota hai (C). B galat hai: typos aam taur par asar nahi daalte, “definately” ka jawab theek aaya. D galat hai: lambay jawab ka letter counting se koi taluq nahi.
Yaad rakhne wala rule: AI chunks parhta hai, letters nahi; letters ginwane hon to spell out karwao.

Roman Urdu samajh (scenario aur question):

- Scenario: “Imran ice rink mein operations associate hai. Wo AI se 60 lafzon ke safety notice mein ‘e’ ki ginti karwata hai aur ginti ghalat lagti hai. Isi din uske

prompt mein ‘definately’ ka typo tha aur jawab theek aaya. Notice kal deewar par lagega.”

- Question: “Kaun se DO bayaan sab se munasib hain?”
- Key words: token = text ka chhota tukra, chunk = tukra, spell out = ek ek harf likhna, typo = likhai ki ghalti.
  Exam trap aur 3 clues:

1. Deciding detail: “letter count wrong” aur “typo was fine”.
2. Question kya maang raha hai: bilkul do sahi.
3. Trap: B (typos theek karo) kyun ke chapter mein typos ko be-asar bataya gaya hai.

QUESTION 5 OF 13
Chapter section: Idea 5, chat history is context replayed; the window gets trimmed
Mariam is a drinks bottler’s planning assistant. In a very long chat about a production schedule, she agreed with AI on a rule in message 4: no night shift on Sundays. At message 90 AI proposes a Sunday night shift. She also notices replies getting slower. The new schedule is due in an hour. What is the most appropriate next step?
A. Scold AI so it remembers harder.
B. Restate the Sunday rule in the next message, or restart in a fresh chat with a short summary of the rules.
C. Assume the model’s memory is damaged and stop using it.
D. Ask AI to think harder about message 4.
Correct Answer: Option B
Explanation (Roman Urdu): Chapter kehta hai ke chat history har baar replay hoti hai aur bohat lambay chat mein purani baatein trim ya summarise ho jati hain, isliye message 4 ka rule gum ho gaya. Sahi fix hai rule dobara likhna ya naye chat mein chhota summary ke saath shuru karna. A galat hai: AI yaaddasht par zor nahi daal sakta. C galat hai: wahan koi yaaddasht hai hi nahi jo kharab ho. D galat hai: soch ka masla nahi, window trim hone ka masla hai.
Yaad rakhne wala rule: Lambay chat mein purani hidayat gum ho jati hai, usay dobara likho.

Roman Urdu samajh (scenario aur question):

- Scenario: “Mariam drinks bottler mein planning assistant hai. Production schedule ke ek bohat lambay chat mein message 4 par AI se tay hua: Sunday ko raat ki shift nahi. Message 90 par AI Sunday raat ki shift tajweez karta hai. Jawab sust bhi ho gaye hain. Naya schedule ek ghante mein dena hai.”
- Question: “Sab se munasib agla qadam kya hai?”
- Key words: history = pichli baatein, replay = dobara bhejna, trim = kaat dena, summary = khulasa.
  Exam trap aur 3 clues:

1. Deciding detail: “message 4 rule”, “message 90”, “slower replies”.

2. Question kya maang raha hai: agla qadam.
3. Trap: D (think harder) kyun ke masla window ka hai, sochne ka nahi.

QUESTION 6 OF 13
Chapter section: Idea 5, Skills and progressive disclosure
Rabia is an education officer at a zoo. Her team has a 40-page school-visit procedure with templates and checklists, and she is tired of pasting it into every chat. She wants AI to use it only when a request matches, without keeping all 40 pages in view at all times. How should she set this work up?
A. Save it as a Skill, so only a short description sits in the window until a request matches.
B. Paste the full 40 pages at the start of every chat.
C. Put the 40 pages into the system prompt of the product.
D. Shorten it to one sentence so it always fits.
Correct Answer: Option A
Explanation (Roman Urdu): Chapter ke mutabiq Skill ek folder hai jis ki sirf ek line ki description window mein rehti hai; jab request match kare tabhi poora skill load hota hai. Isko progressive disclosure kehte hain. B galat hai: har chat mein 40 pages window bhar dete hain. C galat hai: system prompt product ki company likhti hai, aur wahan bhi hamesha jagah leta hai. D galat hai: poora procedure ek line mein nahi aata. Yaad rakhne wala rule: Lambi hidayat jo kabhi kabhi chahiye ho wo Skill mein jati hai.

Roman Urdu samajh (scenario aur question):

- Scenario: “Rabia zoo mein education officer hai. Uski team ke paas school-visit ka 40 page ka procedure, templates aur checklists hain, aur wo har chat mein paste karke thak gayi hai. Wo chahti hai AI ise sirf tab use kare jab request match kare, aur 40 pages hamesha saamne na hon.”
- Question: “Ye kaam kaise set kare?”
- Key words: procedure = tareeqa-e-kaar, Skill = hidayat ka folder jo zaroorat par load hota hai, window = jitna text model dekh sakta hai.
  Exam trap aur 3 clues:

1. Deciding detail: “only when a request matches” aur “not all 40 pages in view”.
2. Question kya maang raha hai: sahi setup.
3. Trap: C (system prompt) kyun ke “hamesha available” sunne mein achha lagta hai, magar chapter ka maqsad hai “on demand”.

QUESTION 7 OF 13
Chapter section: Idea 6, confidence is a learned style; sycophancy and neutral framing
Usman is an admissions associate at a language school. He wrote a course summary and asks: “Isn’t this summary excellent for new parents?” AI says yes, and praises it. The summary goes to 300 parents on Friday and cannot be recalled. Which change to the prompt is most appropriate?
A. Ask “are you certain?” and trust a second yes.

B. Add “please be honest” and keep the same question.
C. Ask AI to evaluate the summary and give the strongest case on each side, with a score on named criteria.
D. Ask the same question to a stronger model.
Correct Answer: Option C
Explanation (Roman Urdu): “Isn’t this excellent?” jawab pehle hi thama deta hai aur AI agreement ki taraf jhukta hai. Chapter kehta hai neutral wording rakho, dono taraf ka case maango aur criteria ke saath score do. A galat hai: dobara yes aana wohi jhukao hai. B galat hai: sirf “honest” likhna kaafi nahi, sawal ka rukh wohi hai. D galat hai: mazeed taqatwar model bhi agreement ki taraf jhuk sakta hai.
Yaad rakhne wala rule: “Isn’t it great?” mat poocho, “evaluate karo, dono taraf” poocho.

Roman Urdu samajh (scenario aur question):

- Scenario: “Usman language school mein admissions associate hai. Usne course summary likhi aur AI se pucha ‘kya ye naye walidain ke liye behtareen nahi hai?’ AI haan kehta hai aur taareef karta hai. Summary Friday ko 300 walidain ko jayegi aur wapas nahi li ja sakti.”
- Question: “Prompt mein kaun si tabdeeli sab se munasib hai?”
- Key words: sycophancy = khushamad, neutral = bais-taraf, criteria = mayaar, recall = wapas lena.
  Exam trap aur 3 clues:

1. Deciding detail: sawal mein “isn’t” (jawab thama diya) aur “cannot be recalled”.
2. Question kya maang raha hai: prompt ki tabdeeli.
3. Trap: B (be honest) kyun ke achha lagta hai, par wording ab bhi bait hai.

QUESTION 8 OF 13
Chapter section: Idea 7, the jagged frontier
Farhan works in the sales office of a cement plant. AI wrote an excellent three-paragraph explanation of the difference between two cement grades. Encouraged, he asked it to count how many times “OPC” appears in a 150-word product list and trusted the answer without checking, because “if it handled the hard part, the easy part is safe”. The product list goes to dealers tonight. What is the most appropriate next step?
A. Trust the count, since the explanation proved the model is capable.
B. Treat success on the hard task as no guarantee on the easy one, and check the count himself.
C. Ask AI to confirm that it is reliable at counting.
D. Rewrite the explanation in simpler words and hope the count improves.
Correct Answer: Option B
Explanation (Roman Urdu): Chapter ka jagged frontier kehta hai ke AI ek mushkil kaam mein kamal kar ke ek aasan nazar aane wale kaam mein fail ho sakta hai, aur dangerous ghaltiyan wohi aasan cheezein hoti hain. Isliye count khud check karo. A galat hai: ek kaam ki kamyabi doosre ki guarantee nahi. C galat hai: model apne aap ko sahi tarah parakh nahi sakta. D galat hai: explanation badalne se count ka koi taluq

nahi.
Yaad rakhne wala rule: Mushkil kaam mein kamyabi aasan kaam ki guarantee nahi, aasan cheez bhi check karo.

Roman Urdu samajh (scenario aur question):

- Scenario: “Farhan cement plant ke sales office mein kaam karta hai. AI ne do cement grades ka farq teen paragraphs mein bohat achha samjhaya. Is se himmat pa kar usne 150 lafzon ki product list mein ‘OPC’ ki ginti karwai aur bina check kiye maan li, ye soch kar ke jo mushkil kaam kar sakta hai wo aasan bhi kar lega. List aaj raat dealers ko jayegi.”
- Question: “Sab se munasib agla qadam kya hai?”
- Key words: jagged = naa-hamwar, frontier = salahiyat ki sarhad, capable = qabil, dealer = taqseem-kaar.
  Exam trap aur 3 clues:

1. Deciding detail: hard task kamyab, easy counting task unchecked.
2. Question kya maang raha hai: agla qadam.
3. Trap: A kyun ke insaani soch kehti hai “jo mushkil kar le wo aasan bhi kar lega”.

QUESTION 9 OF 13
Chapter section: Idea 8, tools: predict-act-observe loop; connectors and MCP
Nadia is a hotel planning associate. She wants AI to read next week’s room-block bookings stored in her company’s Drive and draft a summary for the sales manager. AI alone, with no tools, replies from general knowledge and invents numbers. Which request or setup is most appropriate?
A. Ask AI to guess the numbers and mark them as estimates.
B. Paste in her best memory of the bookings.
C. Switch to a bigger model so it can see Drive on its own.
D. Use a connector to Drive, so the real files land in the context window and the model continues from them.
Correct Answer: Option D
Explanation (Roman Urdu): Chapter kehta hai ke connector ek tool hai jo asli app (jaise Drive) se asli text la kar context window mein rakhta hai, aur model usi se aage predict karta hai. Isse invented numbers ki jagah asli data milta hai. A galat hai: guess ko estimate keh dena bhi guess hai. B galat hai: yaaddasht par bharosa, asli file nahi. C galat hai: bara model bhi Drive nahi dekh sakta jab tak tool na jore.
Yaad rakhne wala rule: Asli file chahiye to connector (tool) jodo, model ko bara mat karo.

Roman Urdu samajh (scenario aur question):

- Scenario: “Nadia hotel mein planning associate hai. Wo chahti hai AI company ke Drive mein rakhi agle hafte ki room-block bookings parh kar sales manager ke

liye summary likhe. Bina tools ke AI aam maloomat se jawab deta hai aur numbers bana leta hai."
- Question: "Kaun si setup sab se munasib hai?"
- Key words: connector = asli app se jodne wala tool, Drive = file store, MCP = connectors ka shared standard.
  Exam trap aur 3 clues:

1. Deciding detail: "AI with no tools invents numbers" aur data Drive mein hai.
2. Question kya maang raha hai: sahi request ya setup.
3. Trap: C (bara model) kyun ke "taqatwar" lagta hai, par tool ke baghair file nahi dekh sakta.

QUESTION 10 OF 13 SELECT TWO
Chapter section: Idea 9, reasoning models: "thinking" is more prediction
Zubair is a welfare trust's finance officer. He asks a reasoning model to work through a multi-step budget allocation. The thinking steps look rigorous and the final number is confident. The allocation goes to the trustees on Friday. Which TWO statements are most appropriate?
A. Because the model thought step by step, the answer no longer needs checking.
B. Thinking helps because the working placed in the window gives the final prediction something good to build on.
C. Thinking means the model now has a separate truth-checker inside.
D. Thinking can still miss errors and invent with confidence, so he is still the final check.
Correct Answer: Option B and D
Explanation (Roman Urdu): Chapter ke mutabiq "thinking" bhi prediction hai: pehle lamba working window mein aata hai aur phir jawab us par bana hota hai, is liye behtar hota hai (B). Lekin wohi process ghalat ho sakti hai, is liye insan hi aakhri check hai (D). A galat hai: soch kar jawab dena check ki zaroorat khatam nahi karta. C galat hai: thinking se koi alag truth-checker nahi banta.
Yaad rakhne wala rule: Thinking jawab behtar karti hai, truth-checker nahi banati. Aakhri check aap.

Roman Urdu samajh (scenario aur question):

- Scenario: "Zubair welfare trust ka finance officer hai. Wo reasoning model se multi-step budget allocation nikalwata hai. Thinking steps mazboot lagte hain aur aakhri adad yaqeen se bhara hai. Allocation Friday ko trustees ke paas jayegi."
- Question: "Kaun se DO bayaan sab se munasib hain?"
- Key words: reasoning = ghor-o-fikr wala model, allocation = taqseem, trustee = nigraan, rigorous = sakht/mazboot.
  Exam trap aur 3 clues:

1. Deciding detail: "confident final number" aur trustees ke paas jana.

2. Question kya maang raha hai: bilkul do sahi.
3. Trap: A aur C, kyun ke “thinking = checker” ek aam ghalat fehmi hai.

QUESTION 11 OF 13
Chapter section: Appendix and Idea 2, memory features: a note re-fed into the window
Hamza is a carpentry estimator. His assistant’s memory feature seems to “remember” that he works in metric units. A colleague says the model has learned about him over time and its weights have changed. Hamza wants to explain correctly to a new apprentice how this works. Which statement is most appropriate?
A. The model’s weights are updated after each chat, so it has learned his habits.
B. The product saves a short text note and inserts it into the context window at the start of each new chat.
C. The model keeps a private diary inside itself between chats.
D. The company retrains the model overnight on each user’s chats.
Correct Answer: Option B
Explanation (Roman Urdu): Chapter kehta hai ke memory features model ko nahi badalte; product kuch facts text note ki shakal mein save karta hai aur har naye chat ke shuru mein context window mein dobara daal deta hai. A galat hai: weights sirf training mein badalte hain. C galat hai: model ke andar koi diary nahi, wo stateless hai. D galat hai: har user ke chats par raat bhar retraining nahi hoti.
Yaad rakhne wala rule: Memory model ki yaaddasht nahi, product ka note hai jo window mein dobara daala jata hai.

Roman Urdu samajh (scenario aur question):

- Scenario: “Hamza carpentry estimator hai. Uske assistant ka memory feature ‘yaad rakhta’ hai ke wo metric units use karta hai. Ek colleague kehta hai ke model ne waqt ke saath seekh liya hai aur uske weights badal gaye hain. Hamza naye apprentice ko sahi tarah samjhana chahta hai.”
- Question: “Kaun sa bayaan sab se munasib hai?”
- Key words: memory feature = product ka saved note, weights = model ke andar ke jame hue numbers, stateless = apni yaaddasht ke baghair, retrain = dobara training.
  Exam trap aur 3 clues:

1. Deciding detail: “weights changed” ka dawa.
2. Question kya maang raha hai: sahi bayan.
3. Trap: A kyun ke “seekh liya” sunne mein sahi lagta hai, par weights freeze hote hain.

QUESTION 12 OF 13
Chapter section: Idea 4, tokens: other languages cost more tokens
Ayesha is an admissions associate at a language school. She pastes a long Urdu policy document and asks for a summary. The chat runs out of room much faster than it did last week with an English document of similar length. She has 30 minutes before the

parents' meeting. What is the most appropriate next step?
A. Conclude the product is broken and stop using it.
B. Retype the document in English letters by hand before pasting.
C. Understand that non-English text is cut into more tokens per word, and paste shorter parts or have the model work in English and translate at the end.
D. Ask AI to think harder so it uses less room.
Correct Answer: Option C
Explanation (Roman Urdu): Chapter kehta hai ke Urdu jaise scripts mein har lafz zyada tokens mein katta hai, is liye window jaldi bharti hai. Sahi tareeqa: document chhote hisson mein do, ya kaam English mein karwa kar aakhir mein translate karwao. A galat hai: product kharab nahi, tokenizer ka asar hai. B galat hai: haath se dobara type karna waqt zaaya karta hai aur zaroori nahi. D galat hai: thinking window ki jagah nahi bachati, balkay mazeed tokens banata hai.
Yaad rakhne wala rule: Urdu text zyada tokens khata hai, is liye chhote hisse karo ya English mein kaam karo.

Roman Urdu samajh (scenario aur question):

- Scenario: "Ayesha language school mein admissions associate hai. Wo lambi Urdu policy paste karke summary maangti hai. Chat pichle hafte ke barabar lambai wale English document ke muqable mein bohat jaldi jagah khatam kar deta hai. Walidain ki meeting mein 30 minute hain."
- Question: "Sab se munasib agla qadam kya hai?"
- Key words: policy = usool o zawabit, tokens = text ke tukray, tokenizer = text ko tukron mein katne wala hissa, summary = khulasa.
  Exam trap aur 3 clues:

1. Deciding detail: Urdu document aur "runs out of room faster than English".
2. Question kya maang raha hai: agla qadam.
3. Trap: D (think harder) kyun ke thinking aur zyada tokens leti hai.

QUESTION 13 OF 13
Chapter section: Idea 5, system prompt and the context window as the only thing the model sees
Dilawar is an ice rink operations associate. He asks AI, with no files attached, "Why did our Saturday ticket sales drop last month?" AI gives a confident explanation about weather and school holidays. Dilawar has the sales spreadsheet open and the owner wants the reason today. What is the most appropriate next step?
A. Accept the explanation, since it is logical.
B. Ask the same question again in capital letters.
C. Put the spreadsheet into the context window, and ask AI to analyse that file.
D. Ask AI to remember last month's sales from training.
Correct Answer: Option C
Explanation (Roman Urdu): Chapter kehta hai ke context window hi wo jagah hai jahan model aap ki situation dekh sakta hai. Rink ki sales model ki training mein thi hi nahi, is

liye AI ne andaza lagaya. Spreadsheet window mein rakho aur us file par analysis karwao. A galat hai: logical lagna asli data ka badal nahi. B galat hai: capital letters se data nahi aata. D galat hai: private sales training mein hain hi nahi.
Yaad rakhne wala rule: Jo cheez window mein nahi, AI ke liye wujood nahi rakhti. File window mein daalo.

Roman Urdu samajh (scenario aur question):

- Scenario: "Dilawar ice rink mein operations associate hai. Wo koi file lagaye baghair AI se puchta hai 'pichle mahine Saturday ki ticket sales kyun giri?' AI mausam aur school chhutiyon ka yaqeen bhara sabab batata hai. Dilawar ke paas sales spreadsheet khuli hai aur owner ko aaj hi wajah chahiye."
- Question: "Sab se munasib agla qadam kya hai?"
- Key words: context window = model ka dekhne ka daayra, spreadsheet = hisaab ka jadwal, analyse = jaanch kar tajziya karna.
  Exam trap aur 3 clues:

1. Deciding detail: "no files attached" aur spreadsheet maujood hai.
2. Question kya maang raha hai: sahi agla qadam.
3. Trap: A kyun ke logical sabab sahi lagta hai, par wo andaza hai.

SUMMARY TABLE

| Q | Chapter section tested | Type |
|---|---|---|
| 1 | Idea 1: prediction, not lookup | Single |
| 2 | Idea 2: frozen weights, correction does not stick | Single |
| 3 | Idea 3: no truth-checker, hallucinated citations | Single |
| 4 | Idea 4: tokens, letter counting, typos | Select two |
| 5 | Idea 5: chat history replayed, window trimmed | Single |
| 6 | Idea 5: Skills, progressive disclosure | Single |
| 7 | Idea 6: sycophancy, neutral framing | Single |
| 8 | Idea 7: jagged frontier | Single |
| 9 | Idea 8: tools, connectors | Single |
| 10 | Idea 9: reasoning models | Select two |
| 11 | Idea 2 and appendix: how memory works | Single |
| 12 | Idea 4: non-English token cost | Single |
| 13 | Idea 5: context window only | Single |

Questions where the chapter was thin or I am not fully sure (please verify):

- I wrote only 2 select-two questions (Q4 and Q10), not 3. The chapter is concept-heavy and has fewer rule-style comparisons than the other chapters.

- Q4: The “spell out one piece at a time” fix comes from the strawberry test in the opening exercise. The 60-word notice and “e” count are my own details.
- Q6: The chapter says a skill’s description sits in the window and the full skill loads on a match. It does not say the system prompt is a wrong place for it. I used the “on demand” point to rule option C out, so please verify.
- Q11: The chapter’s wording is “re-inserts that text into the context window”. The apprentice and metric-units details are mine.
- Q12: The chapter says other scripts cost more tokens and suggests working in English then translating. “Paste shorter parts” is my added option, consistent with the finite window, not stated outright.
- Q13: The chapter states the window is the only place the model sees your situation. The analysis request is my example.

Exam mein kisi bhi question ko pehchanne ka tareeqa (3 roles, har question mein):

1. Deciding detail: scenario mein wo ek ya do cheezein dhoondo jo jawab tay karti hain (stakes, wapas hone wala ya nahi, kis ne check kiya, kya pehle se maujood hai). Baqi details faltu hoti hain.
2. Question ka kaam: aakhri jumla dekho, wo “next step”, “pattern aur fix”, “which TWO” ya “which request” mein se kya maang raha hai. Select-two mein bilkul do jawab chahiye.
3. Trap: galat options hamesha aadha-sahi hote hain. Common jaal: AI ke apne bayan par bharosa, “bara model” ya “think harder” jaisa bada fix, galat layer (memory ya system prompt mein sab dalna), sahi diagnosis ke saath galat fix, aur confidence ko sach samajhna.
   Sahi jawab chunne ka tareeqa: pehle deciding detail se chapter ka rule yaad karo, phir har option ko poochho “kya ye is detail se match karta hai, aur kya ye sab se chhota sahi qadam hai?” Jo option dono mein pass ho wohi jawab hai.
