QUESTION 1 OF 13
Chapter section: Concept 5, three criteria decide who owns a step (reversibility)

A welfare trust's grants officer uses AI to prepare a payment run of 40 small grants. The AI drafts each payment letter well, and the trust is thinking of letting it also release the bank transfers, because the drafts have been strong for two months. A released transfer cannot be pulled back. Which request is most appropriate?

A. Let AI release transfers under Rs 10,000 only, since the drafts have been strong.
B. Keep drafting with AI, and keep releasing transfers with a named human signer.
C. Let AI release the transfers and sample a few after the money has gone out.
D. Stop using AI for the payment run, because one step cannot be undone.

Correct Answer: Option B

Explanation (Roman Urdu): Chapter kehta hai ke drafting reversible hai, isliye AI ko di ja sakti hai, lekin transfer "irreversible" hai, isliye wo human signer ke paas rehna chahiye. Option A galat hai kyunke ye "halo delegation" hai: draft achha tha to agla step bhi de diya, halankeh draft ki quality decision ka saboot nahi. Option C galat hai kyunke check paise jaane ke BAAD hai (galat waqt). Option D galat hai kyunke poora kaam chhor dena zarurat se bara fix hai; drafting AI ke paas rehni chahiye.

Yaad rakhne wala rule: Draft achha hone se agla step safe nahi hota; na-wapas-hone wala step insaan ke paas.

Roman Urdu samajh (word by word):

- *Scenario:*
  - "welfare trust's grants officer" = fallahi idare ki grant dene wali afsar.
  - "payment run of 40 small grants" = 40 chhoti grants ki ek saath adaigi.
  - "drafts have been strong for two months" = do mahine se draft achhe aa rahe hain.
  - "cannot be pulled back" = wapas nahi ho sakta.
- *Mushkil lafz:* release = jaari karna. signer = dastakhat/manzoori dene wala. sample = chhota hissa dekhna.
- *Question line:* "Which request is most appropriate?" = kaun si guzarish sab se munasib hai?
- Exam trap: "Draft achha hai, to agla step bhi de do" (A, C).

QUESTION 2 OF 13
Chapter section: Concept 7, three ways a map goes wrong (unstaffed gate)

A hotel planning associate's workflow map says an events coordinator reviews every AI-drafted group quotation before it is sent. Volume has grown from 20 to 50 quotes a week. When asked who reviewed last week's quotes and for how long, nobody can say. The map was last updated in spring. What is the most appropriate conclusion?

A. The step is effectively automated now, so the map is wrong and the gate must be restaffed.
B. The map is still right, because the review step is written down.
C. The AI drafts have been good, so the review can safely be dropped.
D. The coordinator needs a faster computer to handle the larger volume.

Correct Answer: Option A

Explanation (Roman Urdu): Chapter ka sawal number 2: "pichle hafte kis ne review kiya aur kitni der?" Agar koi jawab na de sake to step automated ho chuka hai aur map ghalat hai. Ye "unstaffed gate" hai. Option B galat hai kyunke map sirf design batata hai, jo chal raha hai wo nahi. Option C galat hai kyunke achhe drafts ko decision ka saboot samajhna halo delegation hai. Option D galat hai kyunke masla computer ka nahi, review ke na hone ka hai.

Yaad rakhne wala rule: Policy nahi, pichla hafta poochho. Jawab na mile to gate khali hai.

Roman Urdu samajh (word by word):

- *Scenario:*
  - "group quotation" = guroh ke liye qeemat ka bhaao.
  - "reviews every AI-drafted quote" = har AI se bane quote ko dekhta hai.
  - "volume has grown from 20 to 50" = tadaad 20 se 50 ho gayi.
  - "last updated in spring" = extra detail.
- *Mushkil lafz:* gate = review ka darwaza. staffed = jahan bande maujood hon. volume = miqdar.
- *Question line:* "most appropriate conclusion" = sab se munasib nateeja.
- Exam trap: "Map mein likha hai, to review ho raha hai" (B).

QUESTION 3 OF 13
Chapter section: Concept 11, diagnosing by timing (context overload)

A restaurant manager has a long Claude chat planning a catering menu. The first hour followed her rule "no nuts in any dish." After two hours of edits, a dessert with almonds appears. She restated the rule once and it held for two replies, then drifted again. Which pattern is this, and what is the fix?

A. Under-specification; add more detail about allergies to the original prompt.
B. Wrong model; switch to the most capable model and keep the same chat.
C. Stale configuration; delete the old menu files from the Project.
D. Context overload; restart from a short summary or persist the rule.

Correct Answer: Option D

Explanation (Roman Urdu): Pehle theek chala, phir bigra: ye “started fine, then degraded” hai, yani context overload. Chat lamba ho gaya aur shuru ki hidayat kamzor ho gayi. Fix: summary se naya session ya rule ko configuration mein rakhna. Option A galat hai kyunke prompt shuru mein theek tha. Option B galat hai kyunke bara model lambe chat ka masla hal nahi karta. Option C galat hai kyunke koi Project ya purani file ka zikr nahi, stale configuration “used to work” wala hota hai.

Yaad rakhne wala rule: Pehle theek, phir kharab = context overload.

Roman Urdu samajh (word by word):

- *Scenario:*
  - “catering menu” = khane ke intezam ka menu.
  - “no nuts in any dish” = kisi dish mein gari (nuts) nahi.
  - “almonds appears” = badam wali dish aa gayi.
  - “held for two replies, then drifted” = do jawab tak chala, phir bhatak gaya.
- *Mushkil lafz:* drift = bhatakna. persist = mustaqil jagah rakhna. overload = zarurat se zyada bhar jana.
- *Question line:* “Which pattern is this, and what is the fix?” = ye kaun sa pattern hai aur hal kya?
- Exam trap: Bara model lagana (B). Timing dekho, model nahi.

QUESTION 4 OF 13 — SELECT TWO
Chapter section: Concept 12, the diagnostic sequence (cheapest first)

A cement plant sales-office clerk asks AI for a summary of customer complaints, and it keeps missing the key points. She is about to switch models. Which TWO checks fit the chapter’s cheapest-first order before she questions whether the task suits AI?

A. Hold the prompt against its five parts and look for a missing one.
B. Declare that the task is not a fit for AI and stop.
C. Check whether the conversation has grown long enough to need a restart.
D. Move straight to the most capable model, since it is the strongest option.

Correct Answer: Option A and C

Explanation (Roman Urdu): Chapter ki seerhi hai: pehle prompt ke paanch hisse (role, context, task, constraints, format), phir conversation ki lambai, phir feature/model, phir configuration, aur sab se akhir mein “kya task fit hai?” Isliye A aur C sahi hain. Option B galat hai kyunke ye aakhri qadam hai jo pehle ke saste checks ke baghair kiya gaya. Option D galat hai kyunke sab se mehnga qadam sab se pehle utha liya.

Yaad rakhne wala rule: Sasta check pehle; model badalna aur “task nahi chalega” sab se aakhir mein.

Roman Urdu samajh (word by word):

- *Scenario:*
  - “sales-office clerk” = bikri daftar ki clerk.
  - “customer complaints” = gahakon ki shikayaten.
  - “keeps missing the key points” = ahem nukte chhorta rehta hai.
- *Mushkil lafz:* cheapest-first = pehle sab se sasta check. constraints = hadood.
- *Question line:* “Which TWO checks” = kaun se DO checks.
- Exam trap: Log seerhi ulti chalte hain, model badalna ya haar maan lena pehle.

QUESTION 5 OF 13
Chapter section: Concept 3, compute, never write

A carpentry estimator asks AI to total the labour hours and materials for a staircase job, and the figures look right. The quote is Rs 900,000 and goes to the client this afternoon. The AI wrote the total in a sentence, with no calculation shown. Which request is most appropriate?

A. Ask for the same total again and send it if both match.
B. Ask AI to say it is confident about the arithmetic.
C. Ask AI to compute it with code execution on his data, then check which columns it used.
D. Ask AI to write the quote more politely, so the client trusts it.

Correct Answer: Option C

Explanation (Roman Urdu): Chapter ka rule: agar natija matter karta hai to compute karo, likho mat, kyunke likha hua aur calculate kiya hua number ek jaisa lagta hai. Code execution sahi hai, magar ye bhi check karna hai ke code ne sahi column uthaya ya nahi. Option A galat hai kyunke dohrane se computation nahi hota. Option B galat hai kyunke confidence saboot nahi. Option D galat hai kyunke tone ka masla hai hi nahi.

Yaad rakhne wala rule: Zaroori number compute karo, phir dekho kya compute hua.

Roman Urdu samajh (word by word):

- *Scenario:*
  - “carpentry estimator” = barhai ka andaza lagane wala.
  - “labour hours and materials” = mehnat ke ghante aur samaan.
  - “goes to the client this afternoon” = dopahar ko gahak ko jayega.
- *Mushkil lafz:* total = kul jama. execution = chalana. columns = khaane.
- *Question line:* “Which request is most appropriate?” = kaun si guzarish munasib hai?
- Exam trap: “Do baar wohi aya to sahi hai” (A).

QUESTION 6 OF 13
Chapter section: Concept 4, the window test (judgment steps)

An operations associate at a drinks bottler asks AI to analyse line-output data and recommend next quarter’s headcount. The trend analysis is accurate, but the recommendation says to hire three operators. Management announced a hiring freeze in a meeting last week, and nothing in the data mentions it. Which diagnosis is most appropriate?

A. The data was wrong, so the whole analysis should be redone.
B. The hiring decision needs an input that cannot be put in the window, so it stays human.
C. The prompt was too short, so a longer prompt will fix the recommendation.
D. The model was too weak, so a stronger one will notice the freeze.

Correct Answer: Option B

Explanation (Roman Urdu): Chapter ka “window test”: kya is step ko jo kuch chahiye wo sab model ke saamne rakha ja sakta hai? Hiring freeze meeting mein tay hua, dataset mein nahi, isliye ye judgment step insaan ka hai. Option A galat hai kyunke data theek tha. Option C galat hai kyunke lamba prompt ghair-maujood faisla nahi la sakta. Option D galat hai kyunke koi bhi model wo cheez nahi jaan sakta jo usay di hi nahi gayi.

Yaad rakhne wala rule: Jo input window mein nahi ja sakta, wo step insaan ka.

Roman Urdu samajh (word by word):

- *Scenario:*
  - “line-output data” = production line ki paidawar ka data.
  - “headcount” = staff ki tadaad.
  - “hiring freeze” = bharti par pabandi.

- *Mushkil lafz:* judgment step = faisle wala qadam. window = jo AI ko nazar aata hai.
- *Question line:* "Which diagnosis is most appropriate?" = kaun si tashkhees sahi hai?
- Exam trap: Bara model ya lamba prompt (C, D).

QUESTION 7 OF 13
Chapter section: Concept 14, rule, reference, or procedure

An analyst at a language school's admissions office runs a weekly enrolment report. Each week she types "exclude withdrawn students" into the chat. When a colleague covered her leave, the report went out with withdrawn students in it. Where should the fix go?

A. A one-line standing instruction in the Project, since it is a rule that always applies.
B. A Skill, since reports are always procedures.
C. The knowledge base, since it is a reference document.
D. A reminder note on her own desk.

Correct Answer: Option A

Explanation (Roman Urdu): Chapter: "kya ye correction dobara chahiye hogi, mujhe ya kisi aur ko?" Haan, to configuration mein jaye. "Exclude withdrawn students" ek rule hai jo hamesha lagu hota hai, aur rules standing instructions mein jate hain. Option B galat hai kyunke ek line ka rule procedure nahi. Option C galat hai kyunke ye parhne ka material nahi, ek hadd hai. Option D galat hai kyunke wo sirf us ek insaan ke liye hai.

Yaad rakhne wala rule: Rule = standing instruction, reference = knowledge, procedure = Skill.

Roman Urdu samajh (word by word):

- *Scenario:*
  - "enrolment report" = dakhlon ki report.
  - "withdrawn students" = jo students naam wapas le chuke.
  - "covered her leave" = us ki chhutti mein kaam sambhala.
- *Mushkil lafz:* standing instruction = hamesha lagu rehne wali hidayat. configuration = mustaqil setup.
- *Question line:* "Where should the fix go?" = fix kahan jaye?
- Exam trap: Fix ko ghalat jagah rakhna.

QUESTION 8 OF 13 — SELECT TWO
Chapter section: Concept 15, friction signals

A hostel bookings team of four runs a weekly occupancy report. Each person pastes the same background text every week, and each formats the output by hand differently, so the manager reconciles four shapes. Which TWO changes match the signal to its fix?

A. The repeated background pasting is repetition; save it as context or a standing instruction.
B. The different shapes are correction; ask each person to be more careful.
C. The different shapes are variance; use a shared Skill or knowledge base.
D. The repeated pasting is variance; rewrite the prompt each week.

Correct Answer: Option A and C

Explanation (Roman Urdu): Chapter ke teen signals: repetition (wohi cheez baar baar paste) to saved context ya standing instruction; correction (har output mein wohi galti) to config change; variance (alag logon ke alag natije) to shared Skill ya knowledge base. Option B galat hai kyunke ye variance hai, aur "zyada careful raho" koi fix nahi. Option D galat hai kyunke pasting repetition hai, aur prompt dobara likhna masla badhata hai.

Yaad rakhne wala rule: Repetition, correction, variance: har signal ka alag fix.

Roman Urdu samajh (word by word):

- *Scenario:*
  - "occupancy report" = kamron ke bharay hone ki report.
  - "pastes the same background" = wohi pas-manzar text lagata hai.
  - "reconciles four shapes" = chaar alag shaklon ko ek karta hai.
- *Mushkil lafz:* friction = chhoti baar baar ki rukawat. variance = logon mein farq.
- *Question line:* "Which TWO changes match a signal to its fix?" = kaun se DO fix signal se milte hain?
- Exam trap: Variance ko "individual ki ghalti" samajhna.

QUESTION 9 OF 13
Chapter section: Concept 16, baseline and parallel run

An ice rink operations associate rebuilt the weekly staff-roster workflow with AI and says it saves "about 20 minutes." She never timed the old way. Her manager asks her to prove it before the three-person team switches over. Which approach is most appropriate?

A. Estimate the old time from memory, since the new one feels faster.
B. Run old and new together for two or three rounds and record time, revisions and manual steps.
C. Switch immediately and measure only the new workflow.
D. Ask the AI to state how much time it saves.

Correct Answer: Option B

Explanation (Roman Urdu): Chapter kehta hai baseline pehle naapni chahiye, aur baad mein purane tareeqe ka andaza aap ko khush-fehm dikhata hai. Ab jab baseline nahi hai, parallel run (purana aur naya saath saath do-teen baar) saboot deta hai: time, revision rounds, manual steps. Option A galat hai kyunke baad ka andaza flatter karta hai. Option C galat hai kyunke muqabla hi nahi rahega. Option D galat hai kyunke AI ka dawa saboot nahi.

Yaad rakhne wala rule: Pehle naapo; baseline na ho to purana aur naya saath chalao.

Roman Urdu samajh (word by word):

- *Scenario:*
  - "staff-roster workflow" = staff ki duty list ka kaam.
  - "about 20 minutes" = takreeban 20 minute.
  - "prove it" = saabit karo.
- *Mushkil lafz:* baseline = purane tareeqe ki naap. parallel run = dono saath chalana.
- *Question line:* "Which approach is most appropriate?" = kaun sa tareeqa munasib hai?
- Exam trap: "Mehsoos hota hai tez hai" (A).

QUESTION 10 OF 13
Chapter section: Concept 10, when prompt-and-iterate is outgrown

A zoo education officer built a visitor-numbers dashboard artifact for her own team. Six months later, three departments open it every Monday, and the finance team copies its numbers into a report for the trustees. A bug shows up on a Friday and nobody knows who should fix it. What is the most appropriate next step?

A. Keep adjusting it by prompt, since that is how it was built.
B. Treat it as infrastructure and hand it to developer or architect expertise.
C. Delete it, because other people depend on it.
D. Ask the AI to rebuild it from scratch in one prompt.

Correct Answer: Option B

Explanation (Roman Urdu): Chapter ka escalation signal “dependency” hai: jab doosre log kisi cheez par infrastructure ki tarah bharosa karein to us ki zarooratein badal jati hain (uptime, access control, koi jisko bulaya ja sake). Ye developer ya architect ka kaam hai. Option A galat hai kyunke chhoti team ki cheez ko abhi bhi prompt se chalana wohi ghalti hai jo chapter batata hai. Option C galat hai kyunke hatana bara fix hai. Option D galat hai kyunke dobara banana dependency ka masla hal nahi karta.

Yaad rakhne wala rule: Jab dusre log nirbhar ho jayen, to wo infrastructure hai aur engineering ki zarurat hai.

Roman Urdu samajh (word by word):

- *Scenario:*
  - “visitor-numbers dashboard” = zair-e-ghor aane walon ki tadaad ka panel.
  - “trustees” = idare ke nigraan.
  - “bug” = software ki ghalti.
- *Mushkil lafz:* dependency = dusron ka nirbhar hona. infrastructure = buniyadi nizam.
- *Question line:* “most appropriate next step” = agla munasib qadam.
- Exam trap: “Escalate karna haar hai” ka khayal (A). Chapter kehta hai ye durust jawab hai.

QUESTION 11 OF 13
Chapter section: Concept 17, when a bad output gets out

A cement plant’s sales office uses an AI workflow that sends monthly price sheets to dealers. A stale price list sat in the Project knowledge for six weeks, so every sheet since then quoted old prices. The sales manager finds out on a Thursday. Which question should the workflow’s designer have decided in advance, and matters most now?

A. How many outputs went out since it went stale, and where they went.
B. Which model produced the sheets.
C. Whether the dealers will notice the difference on their own.
D. Whether to stay silent until the next review date.

Correct Answer: Option A

Explanation (Roman Urdu): Chapter ka sawal “what is already out”: stale configuration ek bura result nahi, jab se stale hua tab se har result bigarta hai, aur koi nahi jaanta kaun sa din tha. Isliye scope pehle. Option B galat hai kyunke model masla nahi, purani

file thi. Option C galat hai kyunke dealers ka khud dekh lena koi plan nahi. Option D galat hai kyunke dair se batana zyada mehnga parta hai.

Yaad rakhne wala rule: Pehle roko, phir scope nikalo: kitne outputs, kahan gaye.

Roman Urdu samajh (word by word):

- *Scenario:*
  - "price sheets to dealers" = dealers ko bhejne wali qeemton ki list.
  - "stale price list" = purani qeematon ki fehrist.
  - "Project knowledge" = Project ki maloomat.
- *Mushkil lafz:* scope = daira. stale = purani. disclosure = batana.
- *Question line:* "Which question… matters most now?" = abhi kaun sa sawal sab se ahem hai?
- Exam trap: Sirf ek output dekhna; asal sawal "kitne" hai.

QUESTION 12 OF 13
Chapter section: Concept 18, say what it does, then name the gate

A subtitling studio manager explains its AI-assisted translation workflow to a client's risk team. He is tempted to write "Our subtitles are fully automated, and AI handles the translation." Every file is reviewed by a qualified translator before delivery. Which description is most appropriate?

A. "AI-assisted drafting, and a qualified translator reviews and approves every file before delivery."
B. "Fully automated, with excellent accuracy."
C. "AI handles it, so turnaround is faster than any person."
D. "It's basically as good as a human translator."

Correct Answer: Option A

Explanation (Roman Urdu): Chapter kehta hai: tool kya karta hai batao, phir human checkpoint ka naam lo. Risk team ko control chahiye. Option B galat hai kyunke "fully automated" aksar sach nahi hota. Option C galat hai kyunke "AI handles X" gate ko jumle se nikal deta hai. Option D galat hai kyunke "as good as a person" aisa meyar hai jo kabhi na kabhi toot jata hai.

Yaad rakhne wala rule: Kya karta hai, phir insaani gate: kabhi gate mat chhupao.

Roman Urdu samajh (word by word):

- *Scenario:*

    - “client’s risk team” = gahak ki khatra sambhalne wali team.
    - “qualified translator” = ahal mutarjim.
    - “before delivery” = hawale karne se pehle.
- *Mushkil lafz:* overstate = barha-chadha kar kehna. checkpoint = jaanch ki jagah.
- *Question line:* “Which description is most appropriate?” = kaun sa bayan sahi hai?
- Exam trap: Gate chhupana “behtar” lagta hai (B, C, D), magar bharosa kam hota hai.

QUESTION 13 OF 13
Chapter section: Concept 8, the scheduled read and map ownership

A zoo’s animal-feeding workflow map was written eight months ago. Since then a reviewer changed roles and visitor volume doubled, but nobody changed the document. The manager wants the map to stay accurate. Which setup is most appropriate?

A. Name one person as map owner and set a quarterly review date.
B. Make the whole team jointly responsible for the map.
C. Rely on whoever notices a change to update it.
D. Rewrite the map from scratch whenever a problem appears.

Correct Answer: Option A

Explanation (Roman Urdu): Chapter kehta hai ke map ko do cheezein chahiye: ek mukarrar owner (team nahi) aur review ki tareekh (quarterly achha default), aur change hone par jaldi. Option B galat hai kyunke “team” ka matlab koi zimmedar nahi. Option C galat hai kyunke aise bigaar mein koi signal nahi aata, isliye scheduled read chahiye. Option D galat hai kyunke masla aane ke baad rewrite bohat der se hai.

Yaad rakhne wala rule: Map ka ek naam wala owner aur ek review ki tareekh.

Roman Urdu samajh (word by word):

- *Scenario:*
    - “feeding workflow map” = khilane ke kaam ka naqsha.
    - “reviewer changed roles” = review karne wale ka kaam badal gaya.
    - “volume doubled” = miqdar dugni.
- *Mushkil lafz:* owner = zimmedar. decay = dheere dheere kharab hona.
- *Question line:* “Which setup is most appropriate?” = kaun sa intezam munasib hai?
- Exam trap: “Sab zimmedar” (B).

Summary table

Q	Chapter section tested	Type
1	Three criteria: reversibility, halo delegation	Single
2	Unstaffed gate	Single
3	Diagnosis by timing: context overload	Single
4	Cheapest-first diagnostic sequence	Select two
5	Compute, never write	Single
6	Window test	Single
7	Rule / reference / procedure	Single
8	Friction signals	Select two
9	Baseline and parallel run	Single
10	Outgrowing prompt-and-iterate	Single
11	When a bad output gets out	Single
12	Say what it does, name the gate	Single
13	Map ownership and scheduled read	Single

Questions to verify yourself

- Q1: The Rs 10,000 limit in option A is my invented detail; the chapter has no money threshold. Check the logic only.
- Q2: The chapter says an unanswerable “who reviewed last week” means the step is automated and the map wrong. “Restaffed” is my wording of the fix.
- Q11: The chapter lists four incident decisions (stop, scope, tell, change the map) but I picked “scope” as the most pressing one now; the stop step could also be argued. Verify.
- Q10: “Handing to developer expertise” is the chapter’s pointer; the exact next step wording is mine.
- Q4: The exact order of the five rungs is from the chapter; the “which TWO” framing is mine.

3 rules for recognising any exam question

Rule 1: Read the last line first and name the question type.

- “Next step?” means one smallest sufficient action.
- “Which pattern and fix?” means diagnosis and fix must both match.
- “Which TWO?” means exactly two options are right.

Rule 2: Find the deciding details in the scenario.

- Can it be undone?
- When did the symptom start (first answer, later, repeatable, used to work)?
- Who checks, and when?
- Does the step need information the AI cannot see?
- Has anyone measured a baseline?

Ignore the extras (dates like “spring”, counts like “four people”).

Rule 3: Name each wrong option’s trap, then pick the smallest fix that matches the chapter rule. Common traps here:

- Good draft treated as proof the next step is safe.
- “It is written on the map” taken as “it is happening.”
- Switching to a bigger model instead of checking timing.
- A fix put in the wrong home (rule vs reference vs procedure).
- Estimating afterwards instead of measuring first.
- Overstating (“fully automated”, “AI handles”) and hiding the gate.

If two options look right, ask which one fits the deciding detail from Rule 2. The other will fail on timing, on who checks, or on size of fix.
